Features

- Our Metal Oxide Varistors have UL, CSA and VDE approvals. VDE approvals are in conjunction with IEC61051-2. Plus specific types comply with Accelerated Aging Test Requirements per ANSI/ IEEE C62.11. The factory is ISO and TS16949 certified. Taped Parts conform to EIA standards. All electrical specifications are to industry standards with definitions conforming to IEEE specifications. Solderability to MIL STD. Epoxy flammability rating of 94V0.
- RoHS Compliance - Metal Oxide Varistors utilizing suffix (-N) denoting RoHS compliant types for disk sizes 05, 07, 10,14, 18, 20, 25, 32, 34, 40, and 53 purchased from World Products, LLC comply with RoHS Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. Our metal oxide varistors contain a maximum concentration value of 0.1% by weight in homogeneous materials for lead, mercury, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE) and of 0.01% weight in homogeneous materials for cadmium. See Part Number System for more details.
- Product consistency is maintained through extremely stringent quality and statistical control. On-line automatic test equipment provides 100% inspection.
- Extensive selection of equivalents to essentially all metal oxide varistor types. All specifications available for proper accurate design-in purposes.
- Extremely low leakage current levels achieved and exceptional surge handling capability through proprietary formulations.
- Epoxy conformity and control providing for consistent physical dimensions and improved solderability.
- Varistor product design flexibility and quick design cycles in order to assist our customers with their most stringent varistor applications.

Definition of Terms (according to IEEE specifications C62.33)

Average Power Dissipation: Tested using two consecutive pulses at rated peak current using a 10/1000μs test waveform with a minimum pulse period of 60 seconds between pulses (IEC 61000-4-5).

Rated RMS Voltage, Rated DC Voltage: The maximum designated values of power system voltage that may be applied continuously between the terminals of a device.

Varistor Voltage: Test characteristic that is used to classify varistors by type. A test current of 1mA DC is typically used to determine varistor voltage classification type. Varistor voltage clamping characteristics can be defined at various test levels.

Rated Peak Single Pulse Transient Current: Maximum surge current, 8/20μs waveform which a varistor is rated to withstand for a single surge.

Rated Single Pulse Transient Energy: Maximum allowable energy for a single impulse (see specified waveforms).

Maximum Clamping Voltage: Measured peak voltage across the device terminals when a current impulse of specified amplitude and waveform is conducted through the varistor.

Typical Capacitance: Typical capacitance values are measured at a test frequency of 1KHZ.

Power Dissipation Ratings

Disk Size	Pm-watts
5mm (< 50 VAC)	0.01
5mm (≥ 50 VAC)	0.20
7mm (< 50 VAC)	0.02
7mm (≥ 50 VAC)	0.25
10mm (< 50 VAC)	0.05
10mm (≥ 50 VAC)	0.40
14mm (< 50 VAC)	0.10
14mm (≥ 50 VAC)	0.60

Disk Size	Pm-watts
20mm (< 50 VAC)	0.20
20mm (≥ 50 VAC)	1.00
25mm	1.20
32mm	1.60
34mm (Single)	2.10
34mm (Dual)	2.73
40mm	2.10
53mm	2.50

General Characteristics

Storage Temperature	- 55° C to + 125° C
Operating Surface Temperature	125° C
Operating Ambient Temperature	- 55° C to + 85° C (without derating)
Maximum Voltage-Temperature Coefficient	< -0.01 % / °C
Insulation Resistance	1000 Megohm min.
Hi POT (Leads to Case, 1 min.)	2500 VDC (Phenolic coating 500 VDC and 2000 VDC ratings)
Typical Response Time	< 15 nsec.
Epoxy Rating	94 V-0
Current/Energy Derating (>85°C)	- 2.5 % / °C
DC Leakage Current	200µA Max (at rated DC working voltage)
Solderability	MIL STD 202G, Method 208H
Failure Criteria	Voltage change ± 10% from initially measured Varistor Voltage. When determining if varistor is within aforementioned criteria the same temperature must be observed as was used for initial Varistor Voltage measurements.

Part Marking

Example: 20E241K-VB

20	**E**	**241**	**K**	-	**N**	**B**
(1)	(2)	(3)	(4)		(5)	(6)

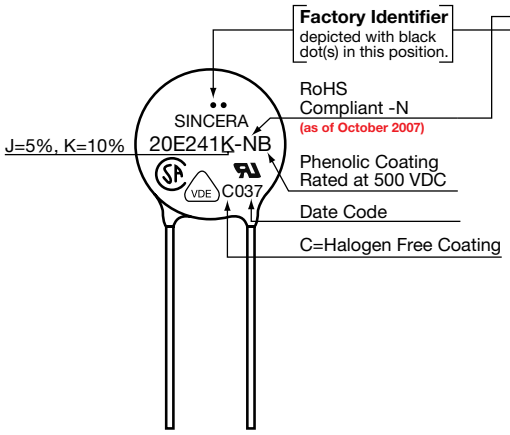
(1) Disk Diameter
5 = 5mm, **7** = 7mm, **10** = 10mm, **14** = 14mm, **18** = 18mm, **20** = 20mm, **25** = 25mm, **32** = 32mm, **34** = 34mm, **40** = 40mm, **53** = 53mm

(2) Type
D = Standard
E = High Energy
R = (applicable only for 34mm Types)

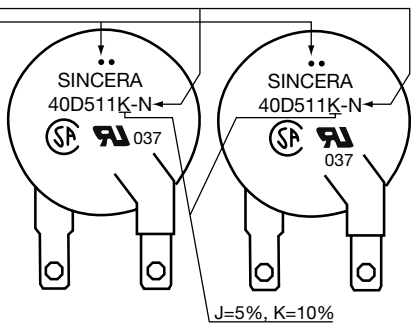
(3) Varistor Voltage
241 = 24 x 10^1 = 240

(4) Tolerance
J = ±5%, **K** = ±10%, **M** = ±20%

5mm – 32mm (Wire Lead)



32mm – 53mm



There are two options for placement of date code for 32mm - 53mm.

(5) N = RoHs Compliant Series (as of October 2007 forward, per Date Code)

(6) B = Phenolic coating rated at 500 VDC. Phenolic coating rated at 2000 VDC requires no marking.

Date Code
037 = First digit represents year (0 = 2010). Second and third digits represent the week of the year.
This new date code system was implemented from 9/15/05.

NOTE: Parts will be marked **SINCERA**. (This is the brand name.)

**Metal Oxide Varistors will not be recognized to UL1414 from December 25, 2013.

Approvals stated above are for "series types" as stated. Modification to the above "series types" denoted by special suffixes may vary with regards to above stated approvals. Please consult the Part Numbering System portion of the catalog for this information.

Part Number System

Example: VZ20D241KBOCX-VPN

V	Z	20	E	241	K	B	O	C	X	-	V	P	N
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)		(11)	(12)	(13)

(1) Series
V = Varistor

(2) Type
Z = Zinc Oxide

(3) Disk Diameter
05 = 5mm, 07 = 7mm, 10 = 10mm, 14 = 14mm,
18 = 18mm, 20 = 20mm, 25 = 25mm, 32 = 32mm,
34 = 34mm, 40 = 40mm, 53 = 53mm

(4) Type
D = Standard
E = High Energy Type
R = (applicable only for 34mm Types)

(5) Varistor Voltage
241 = 24 x 10^1 = 240 (DC Volts)

(6) Tolerance
J = 5%, **K** = 10%

(7) Packing Code
B = Bulk Pack
(For taped parts packing code, see Taping Specifications.)
Note: For sizes 32 and larger please reference specification pages for fields beyond (6).

(8) Lead Configuration (For Bulk Parts)
S = Straight
O = Outward Crimp
I = Inward Crimp
L = Inline Crimp
N = Bulk parts for 320VAC and larger come standard with inline crimp (see illustration below) for straight disk seating on PC boards. If straight leads are required instead of inline crimp please use code "N" in the appropriate position as stated above.
Note: Also applicable for 32mm (KW Series) with wire leads.
R = Bare disk without leads (no epoxy).
Available in 20mm & 25mm disk sizes**(RoHS Compliant).

* Compliant with Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS Directive). Please note solderability profile on page 107.

** 32mm – 53mm types are also available as bare disk with and without leads. Reference suffix codes stated in Electrical/Dimensions section for these types in this catalog.

(9) Lead Cutting
A = 4.0 ± 1.0mm (.16" ± .04")
(Crimped lead)
B = 3.0 ± 1.0mm (.12" ± .04")
(Crimped lead)
C = 4.5 ± 1.5mm (.18" ± .06")
(Crimped lead)
D = 6.5 ± 1.0mm (.26" ± .04")
(Crimped lead)
E = 4.0 ± 1.0mm (.18" ± .04")
(Straight lead)
F = 5.0 ± 1.0mm (.2" ± .04")
(Crimped lead)
G = 3.3 ± 0.5mm (.13" ± .02")
(Crimped lead)
(For lead length reference points see Standard Lead Modifications).
Note: Also applicable for 32mm (KW Series) with wire leads.

(10) Lead Spacing
X = 10mm (0.4") lead spacing 1mm (0.039") lead diameter). (For 18mm and 20mm disk diameter only.)
Z = 5mm (0.2") leadspacing.
(For 10mm and 14mm disk diameters.)

(11) Extremely High Energy Rating
V = 15KA for 20mm,12KA for 18mm and 7.5KA for 14mm, "E Series" parts only. Available in varistor voltages 14mm and 20mm (181-112), 18mm (181-781) (UL1414 and UL1449 3rd Edition recognized parts). CSA recognized for 14, 18 & 20mm "E Series" parts all values ≥ 201 with the exception of 14E (911, 102 & 112). 14E "V" series parts are rated at 7.5KA. (If you have a special voltage request, please inquire).***

(12) Coating Option
P = Phenolic Coating with 2000VDC rating. Applicable for UL1414 (5mm – 20mm), UL1449 3rd Edition (14mm, 18mm and 20mm "V" type only), and CSA (5mm – 20mm) recognized parts.***
B = Phenolic Coating with 500VDC rating. Applicable for UL1414 (5mm – 20mm) and CSA (5mm - 20mm) recognized parts.***
Y= Bare disk with leads (no epoxy).
Available in 20mm & 25mm disk size** (RoHS Compliant 20E suffix "V" 181K - 471K CSA c/us certified File #154862).
C= Halogen Free Coating. Applicable for UL1449 (3rd Edition), UL1414, (5mm-20mm), CSA (5mm-25mm) and VDE (14D, 14E, 18E and 20E only).***

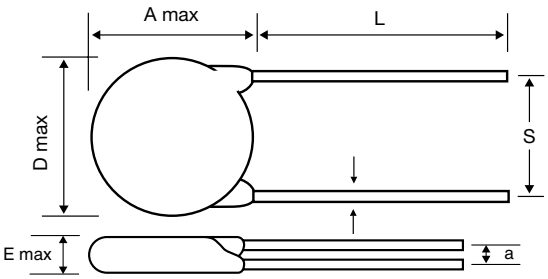
(13) RoHS Compliant*
N = RoHS Compliant
(Available in disk sizes 5mm – 53mm)

***Metal Oxide Varistors may not be recognized to UL1414 from December 25, 2013.

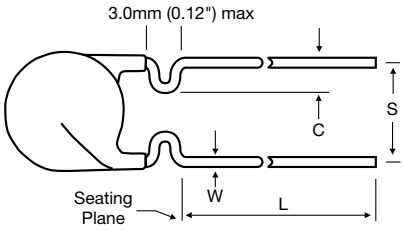
Standard Dimensions and Lead Modification Options

+ Dmax for Phenolic "P" Type is 8mm (.31").
* For 10mm lead spacing use suffix "X" for bulk parts (18mm and 20mm disk diameter)

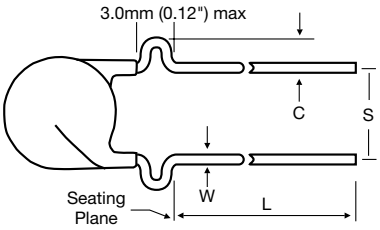
Straight Leads



Inward Crimp



Outward Crimp



Inline Crimp

Notes:

1. Maximum epoxy extending on leads (measured from bottom most portion of disk) is 3mm for all disk sizes with exception of 20mm, 25mm and 32mm disk sizes which are 4mm.
2. Reduced dimensions, special lead diameters and special lead spacing may be avaliable upon request.
3. Bulk parts for 320VAC and larger come standard with inline crimp (as referenced above) for straight disk seating on PC boards. If 320VAC and larger size are required without in-line crimp, please reference "Part Number System" position # (8) and add "N" and reference "a" off-set dimensions.
4. The maximum straight lead length avaliable for 5mm leadspacing is 40mm max, 7.5mm leadspacing is 32mm max, 10mm leadspacing is 35mm max.

* Bulk parts for 320VAC and larger come standard with inline crimp (as referenced at beginning of “Standard Dimensions and Lead Modification Options” section) for straight disk seating on PC boards. Therefore, “a” dimension is not applicable. If 320VAC and larger size are required without in-line crimp, please reference “Part Number System” position # (8) and add “N” and reference “a” dimensions (for off-set) above.

* Bulk parts for 320VAC and larger come standard with inline crimp (as referenced at beginning of “Standard Dimensions and Lead Modification Options” section) for straight disk seating on PC boards. Therefore, “a” dimension is not applicable. If 320VAC and larger size are required without in-line crimp, please reference “Part Number System” position # (8) and add “N” and reference “a” dimensions (for off-set) above.

** These dimensions also apply to “E” Series (High Energy) parts. For suffix “V” (Extremely High Energy Type) add 0.1 (0.004) to “E Max.”

(Also applies to “E” series parts)

At idle power, current levels shown to the left of the diskontinuity illustrate typically the high end leakage current. However, if lower leakage current levels are desired, they may be guaranteed. In the clamping voltage region to the right of the diskontinuity, maximum clamping voltage is plotted.

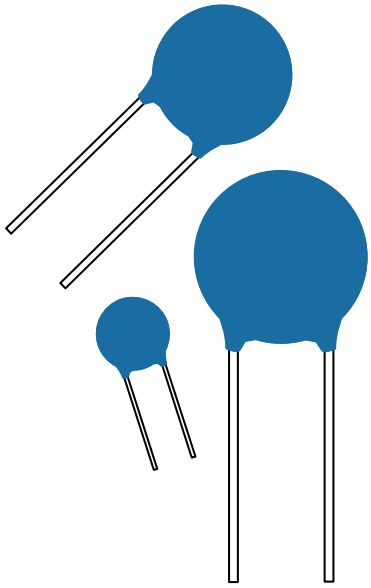
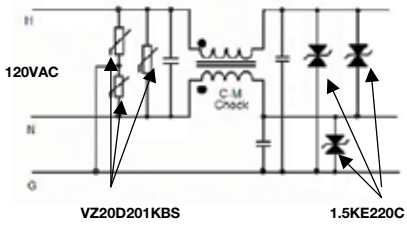
Applications

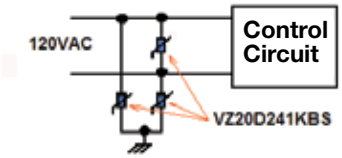


Metal Oxide Varistors are transient voltage surge suppression products. Used in both AC and DC applications, these devices clamp transient voltages and divert transient currents. Metal oxide Varistors are available in the widest range of voltages and current handling sizes.

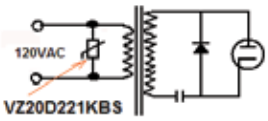
MOV In AC Line Protection



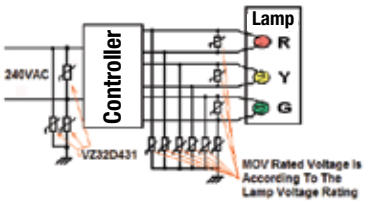
MOV In Control Circuit Protection



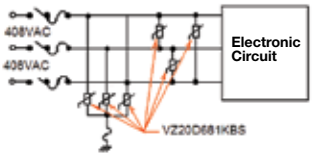
MOV In Microwave Oven



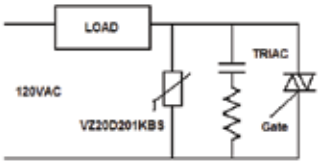
MOV In Traffic Light Protection



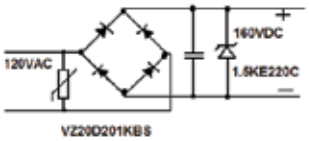
MOV for 3 Phase AC Line Protection



MOV in Triac Protection



MOV in Bridge Rectifier Protection



MOV in Automotive Equipment Protection
