Firmware version update

Firmware version	Modified Time	Modify Content	Note
V1. 0. 0	2016. 5	1. Initial version	
V1. 1. 3	2016. 5	1, fix the firmware update or change the baud rate, the touch screen can not communicate with the motherboard error; 2. Fixed a bug in reset or control error when setting more menus.	
V1. 1. 4	2016. 6	1. Increase the maximum temperature of the nozzle and hot bed in the mks_config.txt configuration file. 2. Increase the default level of the breakout interface and configure it in mks_config.txt. 3. Modify the "About" interface to display as TYPE: MKS TFT 4, fix the U disk crash BUG. 5. The leveling button is not displayed by default.	
V1. 1. 5	2016. 8	1, increase the function of "auto off after finish printing" function in mks_config.txt. 2. In the print interface, more "buttons" are added to select the function of "shutdown".	
V1. 2. 0	2016. 11	1. The display interface is faster and more sensitive. 2, You can switch from simplified Chinese, traditional Chinese and English to three languages. 3. The WiFi interface is corrected. Every time the power is on, the initial value in the 2 minutes is bug. 4. Corrected the bug that displayed the prompting information and sometimes the font size was abnormal when there was no SD card or U disk after power failure. 5. Increase the function of manual leveling. 6. Increase the feeding function; 7. In the printing operation interface, add more "customizable buttons"; 8. Delete the "correction" button of the "setup" interface.	
V2. 0. 0	2017. 2	1. update the layout of the interface to add 3 different home page interfaces (corresponding to 3 different firmware). 2. interface of set to increase the function of "breakpoint recovery". 3. delete the connection button and set the baud rate to mks_config.txt. 4. update the layout of the "leveling" interface 5. revise after printing, suspend and reload. The extrusion position of E is abnormal bug. 6. the height of the Z axis can be seen in the mobile or print.	
V2. 0. 1	2017. 5	1, the repair of the port of the auto off after finishing function; 2, modify the manual leveling or automatic leveling. 3, compatible with MKS WIFI TFT and MKS HLK-WIFI, compatible with the new version of mobile APP MKSCloud. 4, increased cloud services, mobile phone transmission files and other Internet functions; 5, increase the style of Windows.	

V3.0.0	2017.9	1, increase the number of languages, can switch online 7 languages; 2. Repair the problem of WIFI transmission. 3. The function of feeding is optimized.	
V3.0.1	2017.12	1, the V3.0.1 firmware version WIN8 style in the switch language font display effect is not good, so win8 style can only use picture display. 2, the difference between the Chinese version and the English version of firmware is that the annotation in the configuration file is in Chinese or English. 3, V3.0.1 firmware version added configuration item: manual leveling XY axis movement, extrusion head Z axis from the height of origin (mm) 4. V3.0.1 firmware version update the blue version of the motor button button. 5, repair the V3.0.1 firmware version WIN8 version of the English version of the manual leveling icon instead.	
V3.0.2	2018.5	1. Add the "turn off motor" on the return to zero interface in the classic version. 2. Modify the preheating interface and change the default 180 to 0 to show the actual target temperature. 3, increase report error function, filter line number error. 4, fan press + - to start 5, click the "more" command processing function will appear reboot phenomenon. 6. When more than 5 instructions are reset using M110, the motherboard will stop action. 7. Adding configuration items can shield the power off and filament detection function. 8, modify the bug that the serial interrupt sends will be interrupted 9, modify the U disk or SD card printing failed to read. 10. Add the configuration item to support the two - in - out model 11. Add a button on the WIFI interface to control whether the WIFI module function. 12, repair the simplified version and retro version of the firmware manual manual adjustment, do not return to zero, then start leveling. 13, WiFi firmware repair password settings are less than 8 bits when using abnormal problems.

I .Overview

MKS-TFT 24 is an independent color touch product developed for maker base , which is suitable for open source 3D printers. It can be used in a series of motherboards such as MKS Base, MKS Gen, MKS Sbase and so on.

II Features

1. Support 7 Languages Online switching.
2. the 2.4 inch color touch screen occupies less space and supports all Chinese Gcode printing.
3. Reserve Wifi port, increase Wifi module can support Wifi function;
4. Provide three themes, two styles, so that users can choose more.
5. Boot logo and all buttons can be self designed.
6. A maximum of 13 directive functions can be customized.
7. Upgrade configuration firmware by sd card, simple and convenient operation.
8. Support for Marlin firmware, Repetier firmware, Smoothieware firmware.
9. The main control program does not need to be modified, that is, plug and play
10. Support multiple functions,such as Breakpoints recovery function,filament detecting function,save the gcode data with power off function.
11. can cooperate with the module to Implement the auto off after finishing function.

III . The TFT24 parameters

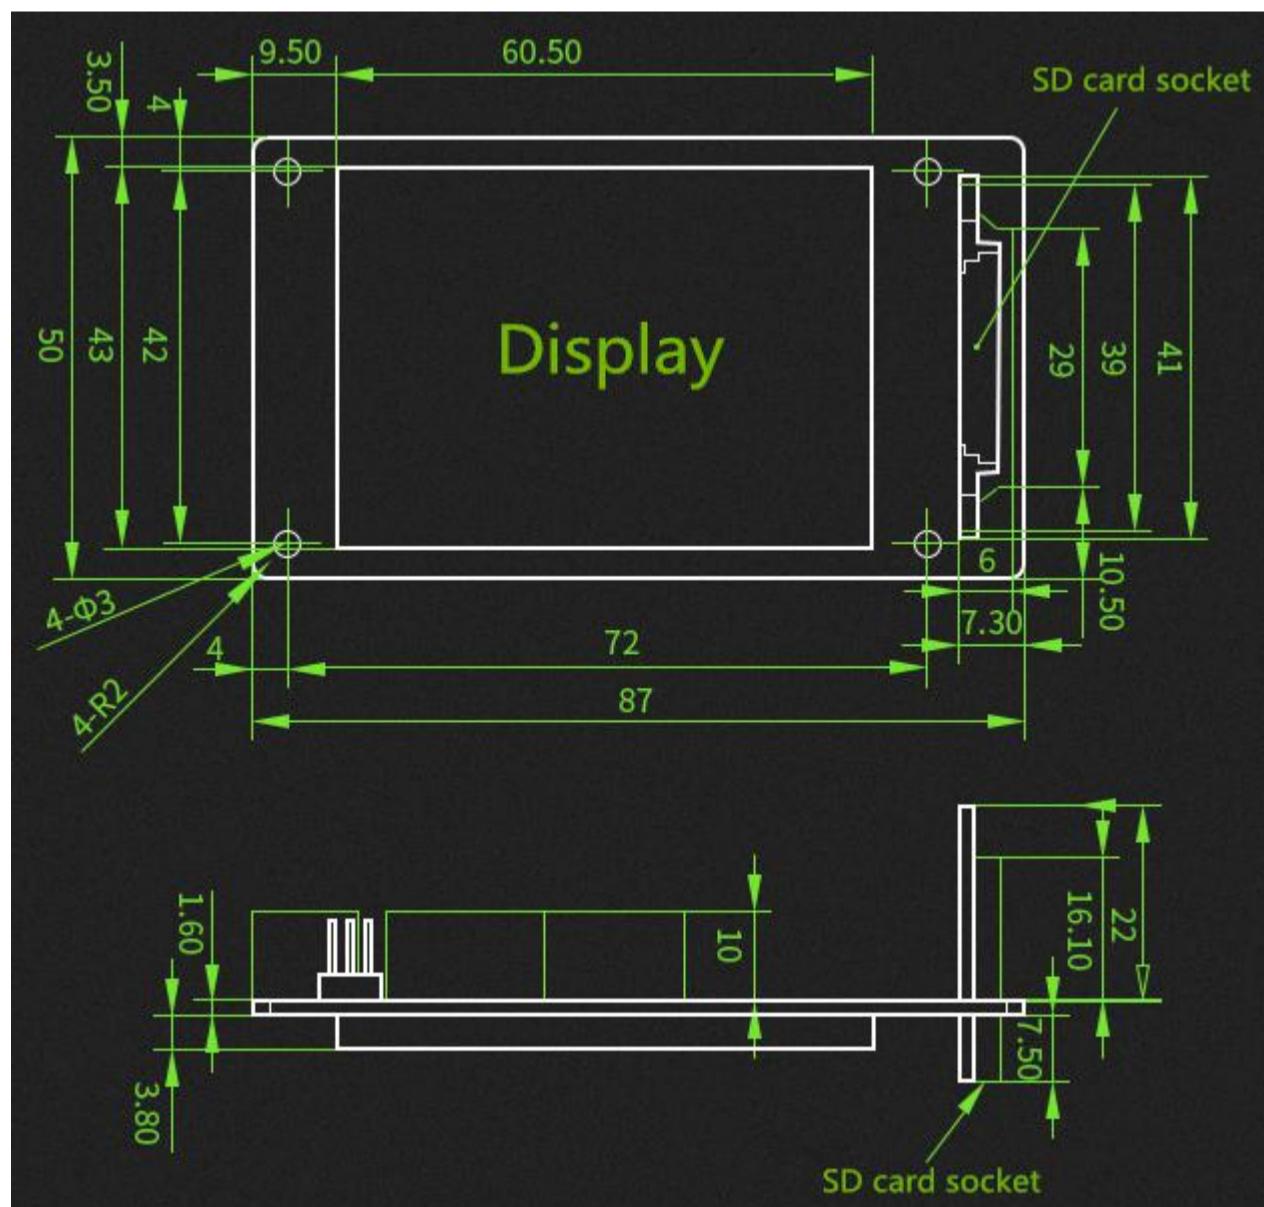

Motherboard	MKS TFT24	microprocessor:	STM32
model:			
Dimensions:	87mm×50mm	Mounting	72mm×42mm
dimensions:			
Touch screen type:	Resistance screen	touch screen	2.4 inch
size:			
Extension function:	Auto off after print finish、WIFI module、power off detecting	function:	Power off recovery, breakpoint recovery, filament detecting, Custom interface, cloud print.
Print file format:	G-code	Mechanical structure:	I3、XYZ、delta、kossel、corexy
Recommendation software:	Cura、Simplify3d、Repetier-Host	Firmware	SD card
Update:			

IV . Port Instructions

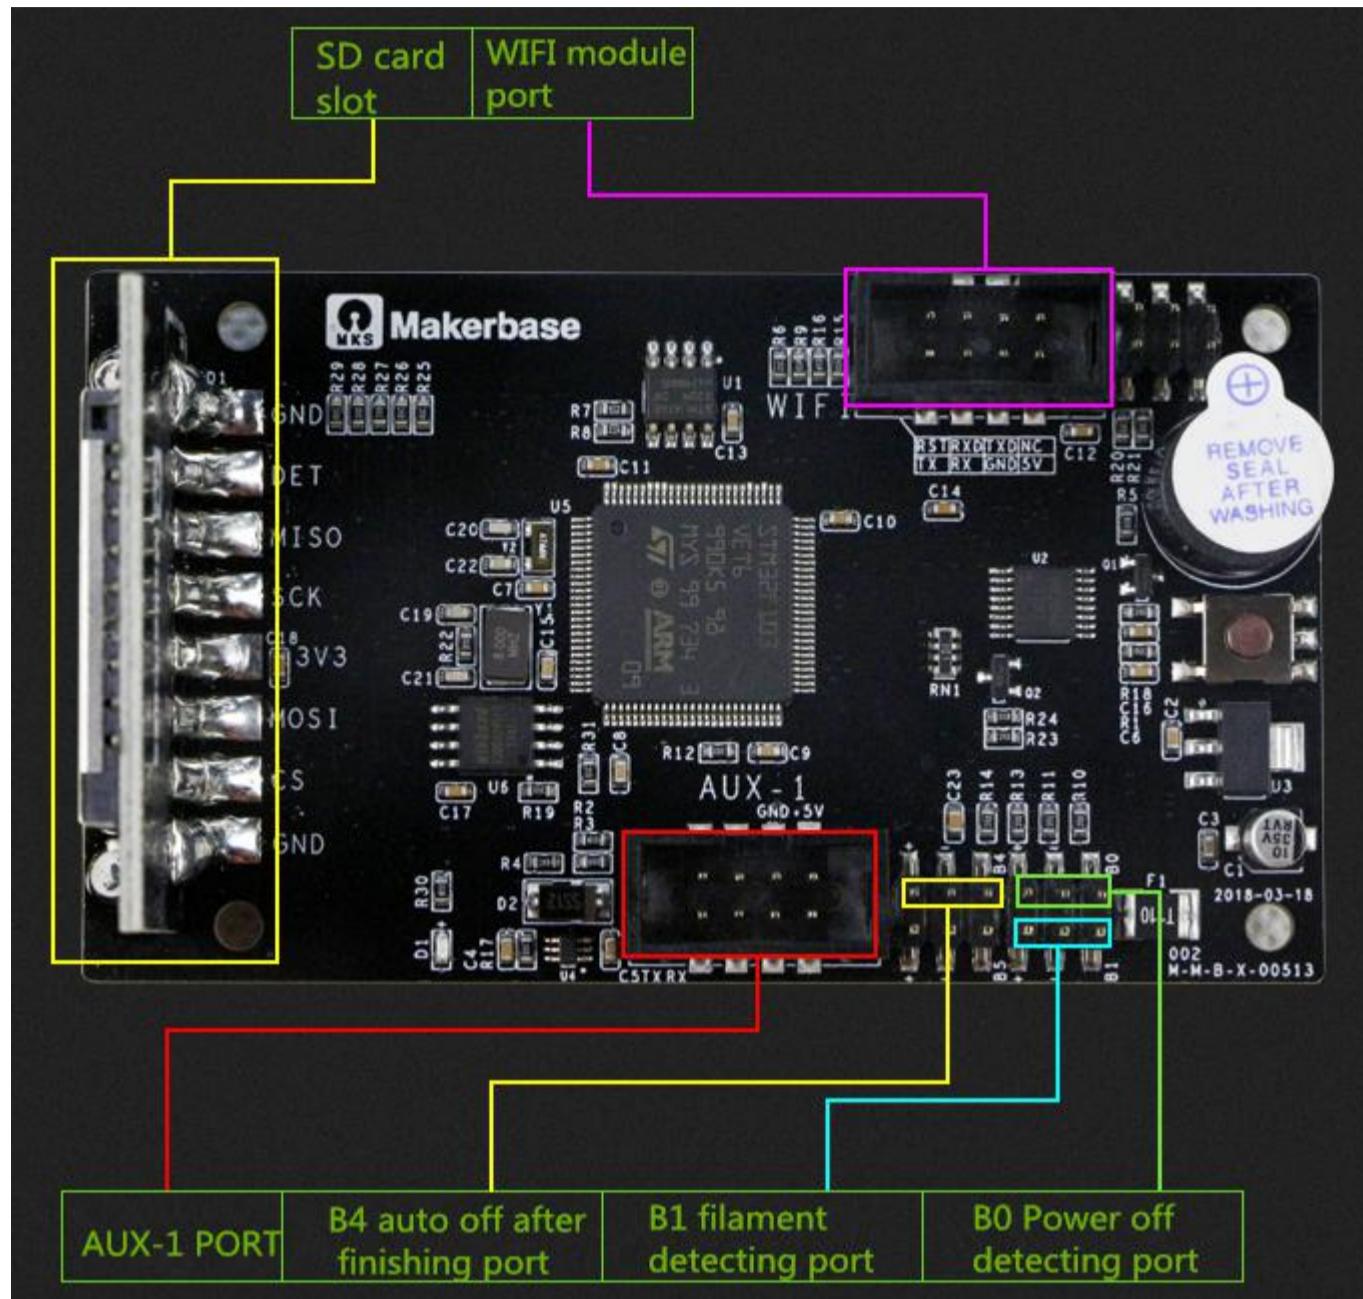

4.1 MKS TFT24 Front

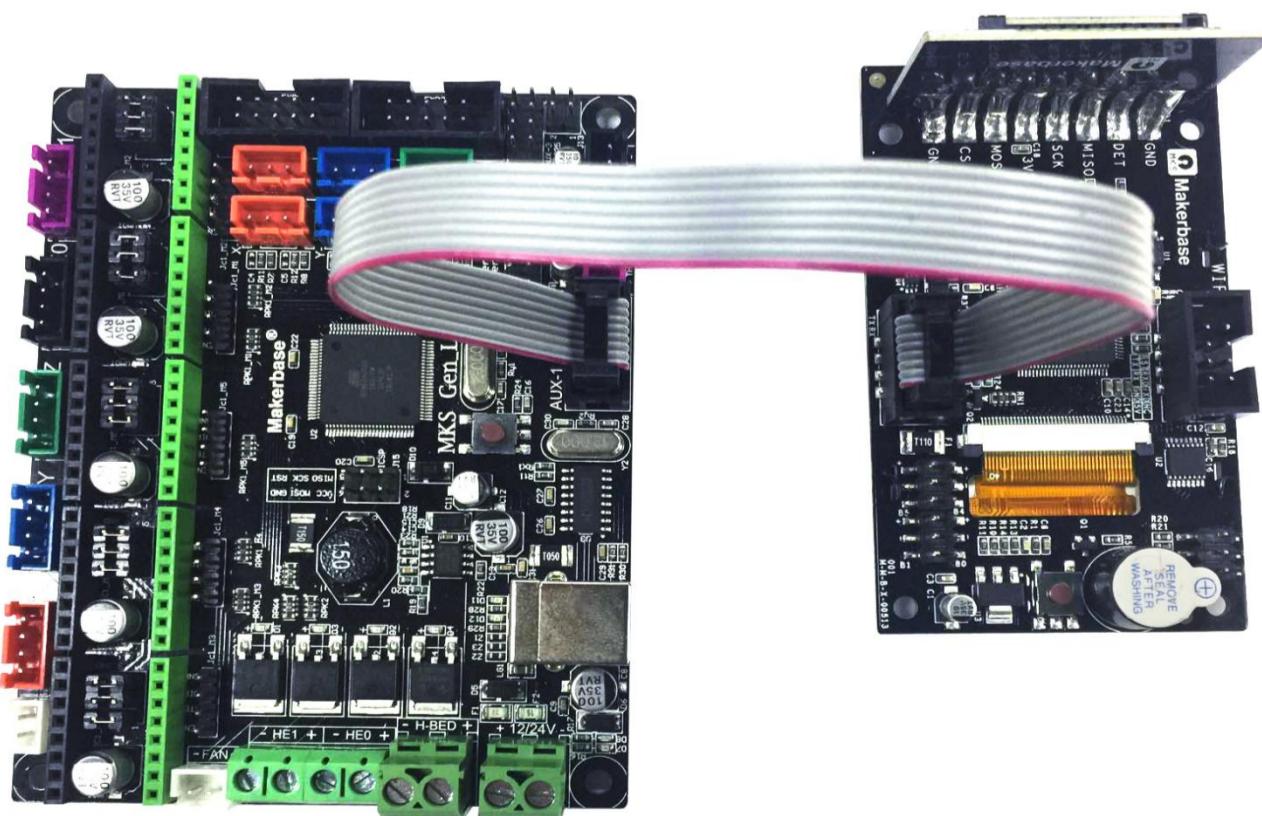

4.2 MKS TFT24 Installation Dimensional Drawing

4.3 System connection diagram

4.4 Connection with motherboard

V .Firmware Upgrade Instructions

The factory firmware is up to date, so no need to update.

5.1 The ways to get the MKS TFT24 Latest Firmware.

- Get firmware from customer service or technician
- Download the firmware from the makerbase discussion group.
- Download on Web:
 - ★ <https://github.com/makerbase-mks?tab=repositories>

5.2 The methods for updating the firmware

5.2.1 Copy the latest upgrade to the SD card root directory, including:

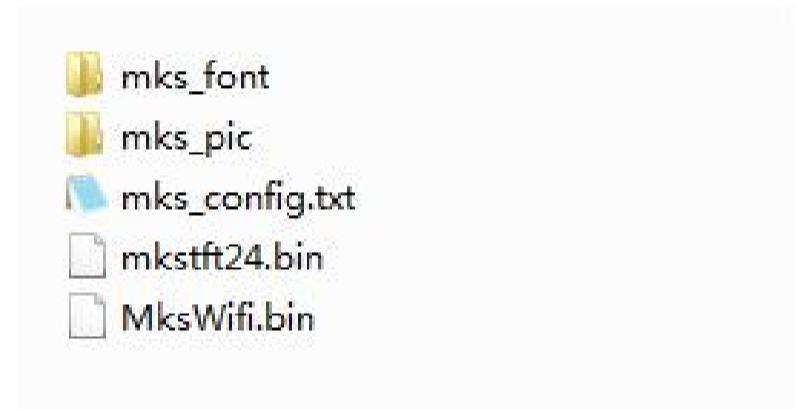

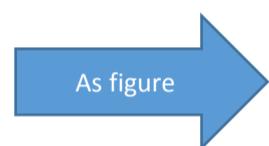

Mks_font

Mks_pic

Mks_config.txt

Mks_tft24.bin

Mks_WiFi.bin

Attention:Do not modify file names.

No need to copy mkswifi.bin without WiFi module.

5.2.2 Plug the SD card into the motherboard and power on, hear drops ~ ~ A short sound, touch screen display update process, and so about 30S after the completion of the update.

5.2.3 You can click "Settings--about" on the touch screen , to view current firmware information.

5.2.4 Advice: After the update is complete, delete the pictures and Fonts folder, avoid the next time to update the pictures and fonts.

VI .Function parameter Configuration

6.1 Base settings (Important, must be set)

```
##### Printer type setting #####
#mainboard firmware setting(marlin:1; repetier:2; smoothie:3)
>cfg_firmware_type:1

#machine setting (Normal:1; Delta:2)
>cfg_machine_type:1

#baud rate (9600:1; 57600:2; 115200:3; 250000:4)
>cfg_baud_rate:4

#multi-language(enable:1, disable:0)
>cfg_multiple_language:1

#languages setting(simplified (simplified Chinese:1; traditional Chinese:2; English:3; Russian:4; Spanish:5; French:6; Italian:7).
#This configuration is valid when "cfg_multiple_language" is disabled.
>cfg_language_type:3

#extruder number(one:1; dual:2)
>cfg_sprayer_counter:1

#enable heated bed(yes:1; no: 0)
>cfg_custom_bed_flag:1

#the max target temp of extruder and heated bed
>cfg_max_sprayer_temperature:270
>cfg_max_hotbed_temperature:150

#pause position (-1 is invalid; Z-axis is relative position)
>cfg_XPOS:-1
>cfg_YPOS:-1
>cfg_ZADD:10
```

After getting the configuration file from the technician, you need to configure the printer type settings.

Attention: 1.The baud rate in the configuration file must be the same as the motherboard baud rate, so that you can communicate.

2.Because the touch screen is the use of serial communication, to avoid conflicts with the USB .When connecting to the touchscreen, it is best not to connect the USB port on the motherboard.Similarly, when burning the firmware to the motherboard, it is best to unplug the touchscreen connector.

1. Do not enable multi-language language: Use with the previous text, the text is in the picture, the displayed language can only be displayed by brushing the picture.
2. Enable multi-language: You can slice the language freely in the language options in the settings, currently supports up to 5 languages.

Language (1: Simplified Chinese; 2: Traditional Chinese; 3: English; 4: Russian; 5: Spanish 6: French, 7: Italian)

#This configuration is valid only when cfg_multiple_language is set to 1.

```
#multi-language(enable:1, disable:0)
>cfg_multiple_language:1

#languages setting(simplified Chinese:1; traditional Chinese:2; English:3; Russian:4; Spanish:5; French:6; Italian:7).
#This configuration is valid when "cfg_multiple_language" is disabled.
>cfg_language_type:3
```

6.3 Automatic Leveling and Manual leveling

1 . Equipped with a leveling device can be selected in the configuration file automatic leveling (the position of the arrow is configured to 1), in the Touch screen settings interface can be adjusted leveling.**Attention:For motherboards using the smoothie firmware, select the command to send as G32, as shown below:**

```
#leveling mode(manual:0; auto:1; conceal leveling button:2)
>cfg_leveling_mode:0

#the command of auto leveling (G29 is available for Marlin. While G32 is for Repetier and Smoothieware)
>cfg_auto_leveling_cmd:G28;G29;
```

2 . Manual leveling can be used on the general model structure (MB, I3, etc.), set in the configuration file needs to be in the hot bed leveling the three point leveling, four point leveling or five point leveling, the following figure:

```
#the point number of manual leveling:(3,4,5 point available)
>cfg_point_number:4

#the coordinates of 5 point on manual leveling
>cfg_point1:50,50
>cfg_point2:180,50
>cfg_point3:180,180
>cfg_point4:50,180
>cfg_point5:150,150

#the travel speed of leveling(mm/min)
>cfg_leveling_z_speed:1500
>cfg_leveling_xy_speed:3000
```

6.4 Filament Change Function

Filament Change Function, so that you more convenient to replace the supplies, you can also pause in the printing point after the use of the feed function. The extrusion head rotation speed and minimum temperature can be configured in the configuration file, as shown in the following figure:

```

##### Filament Change Function #####
#the speed to extrude filament(mm/min)
>cfg_filament_load_speed:1200
#the lenght to extrude filament (mm)
>cfg_filament_load_length:200

#the speed to retract filament(mm/min)
>cfg_filament_unload_speed:1200
#the lenght to retract filament(mm)
>cfg_filament_unload_length:200

#It is the minimum temperature for filament change.
It will auto heat up if the current temp doesn't reach the target.
>cfg_filament_load_limit_temperature:200

```

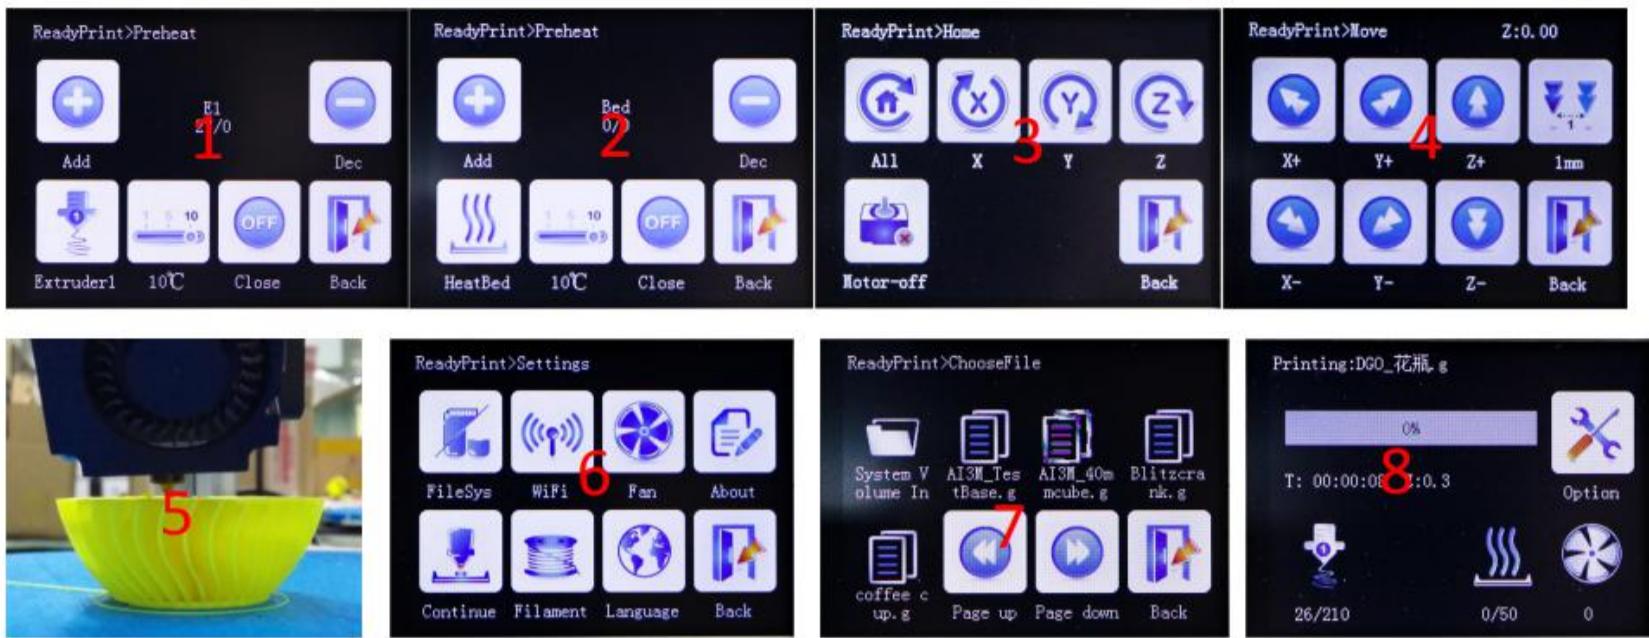

6.5 Breakpoints recovery

When you spend most of your time printing a model, the careless error operation causes the print to stop, but does not want to waste the printed model. Then you can use the breakpoint to continue to play the function, save your beloved model. The following illustration requires that you follow these steps:

1. First click “Preheat”, the extrusion head and hot bed target temperature set (no hot bed can ignore the hot bed target temperature).as Figure 1
2. When the temperature reaches the target temperature, click “homing”, choose to homing, so that the axes are back to home point.(Attention:Model printing failure to select Breakpoints recovery the operation between the Midway, if there is a power outage must be homing operation, such as continuous electricity can not return to home point operation).as Figure 2
3. After the axis back to home points, move the z axis will touch the mouth to stop printing of the layer, such as Figure 3, Figure 4, the time to test eyesight (can be selected in the configuration file to allow error, the following figure)
4. Point setting, click on the breakpoint recovery and select the file to be printed on the breakpoint recovery, as shown in Figure 5, figure 6.
5. After you select the file, wait for it to print.as Figure 7.

(After selecting the model, the larger the model, the more complex it is, the longer it waits here.)

The steps of breakpoints recovery:

6.6 Save the gcode data with power off

In the printing process into a paused state, when without anyone watching you can directly shut down, the next time you can start from the pause to continue printing.

(Attention: Remember to delete the updated file in the SD card, to avoid the reboot and update the firmware, affect this feature).

6.7 Power off recovery

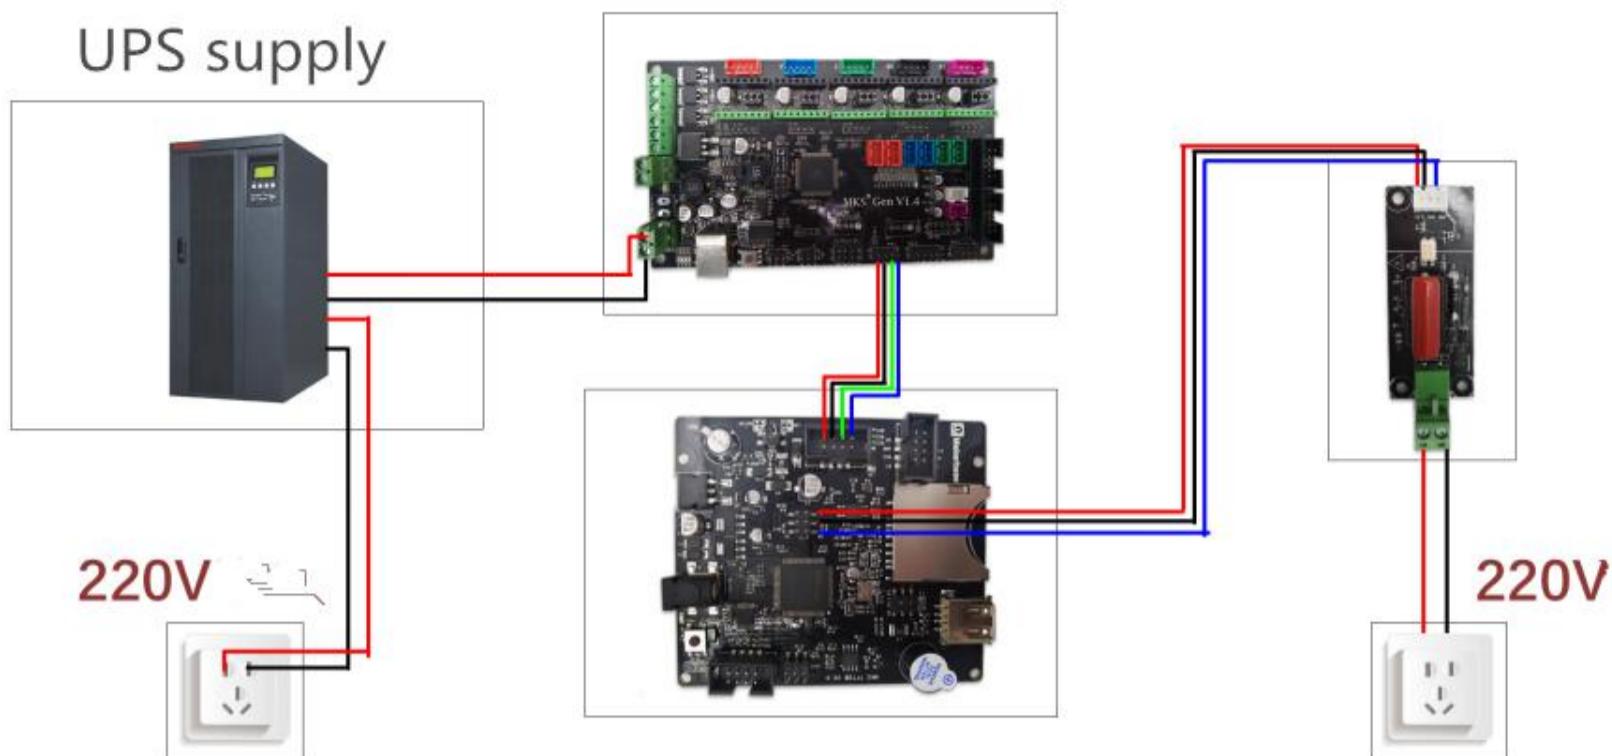

1. No UPS Power

1.1 A sudden power outage during the printing process, machine can continue to print from the power off. (due to power failure can not drive the motor, the print head will still remain on the model, may cause defects in the model, if the need for more complete power off processing, the need for power detection module and UPS).

Have UPS power

2.1 Power detecting module signal line s connection PB0, negative positive connection -and + two pins blow the PBO.

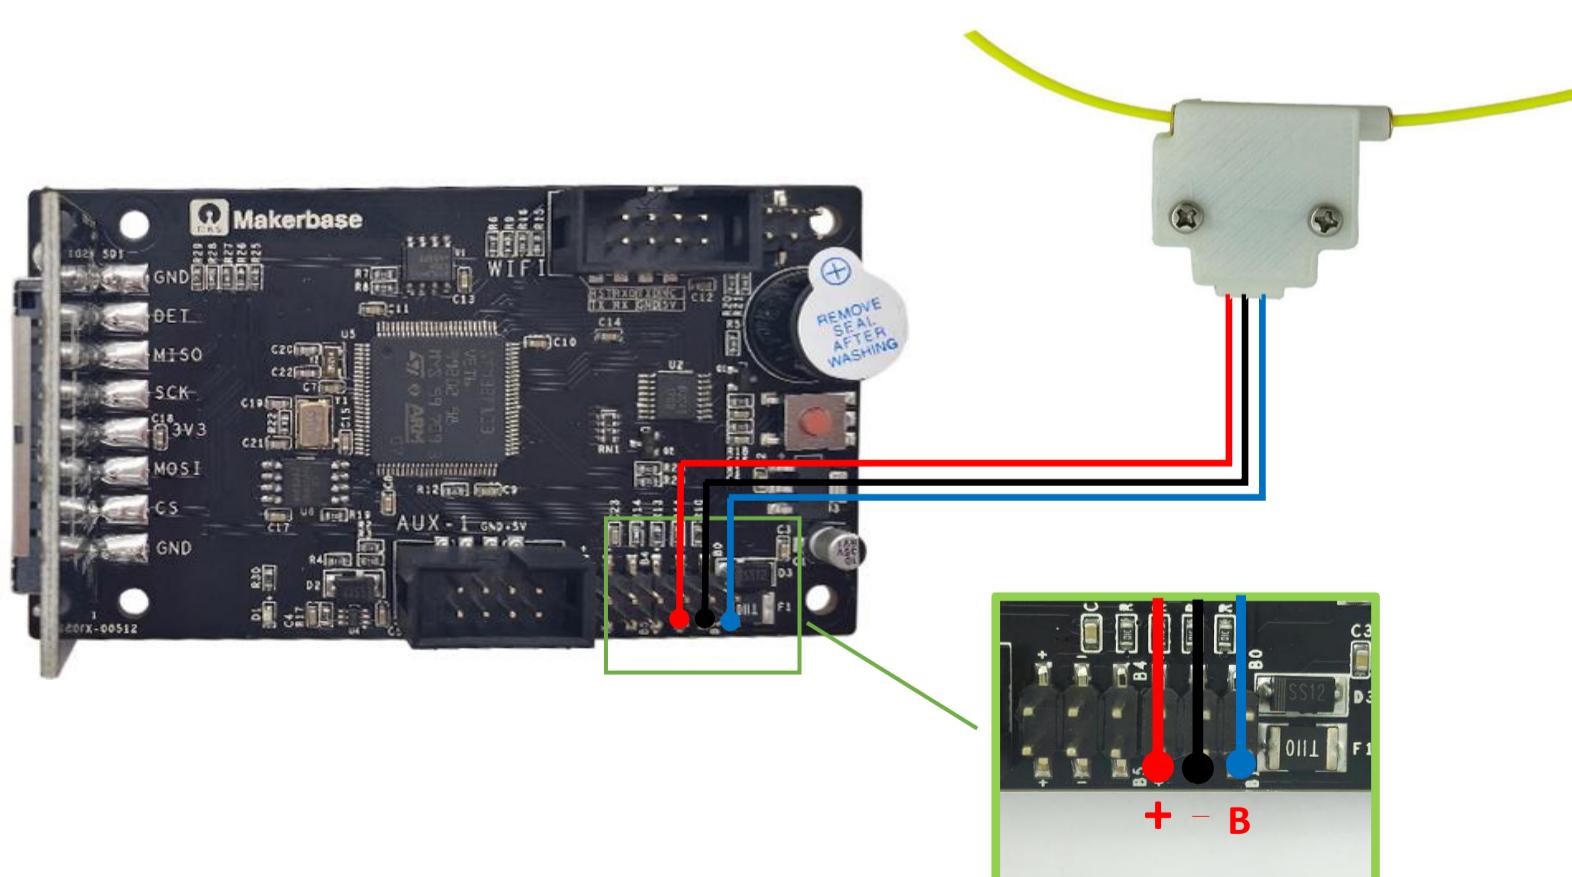

2.2 When the system loses power, the Power detection module informs the touch screen to enter the suspend printing state, UPS power supply. Leave the print head out of the model.

6.8 Filament detecting

The end of the break detection switch is connected to the PB1, the other end is connected to the PB1 under the " - " pin, can be in the configuration file to select a high level of effective or low level effective, the following figure

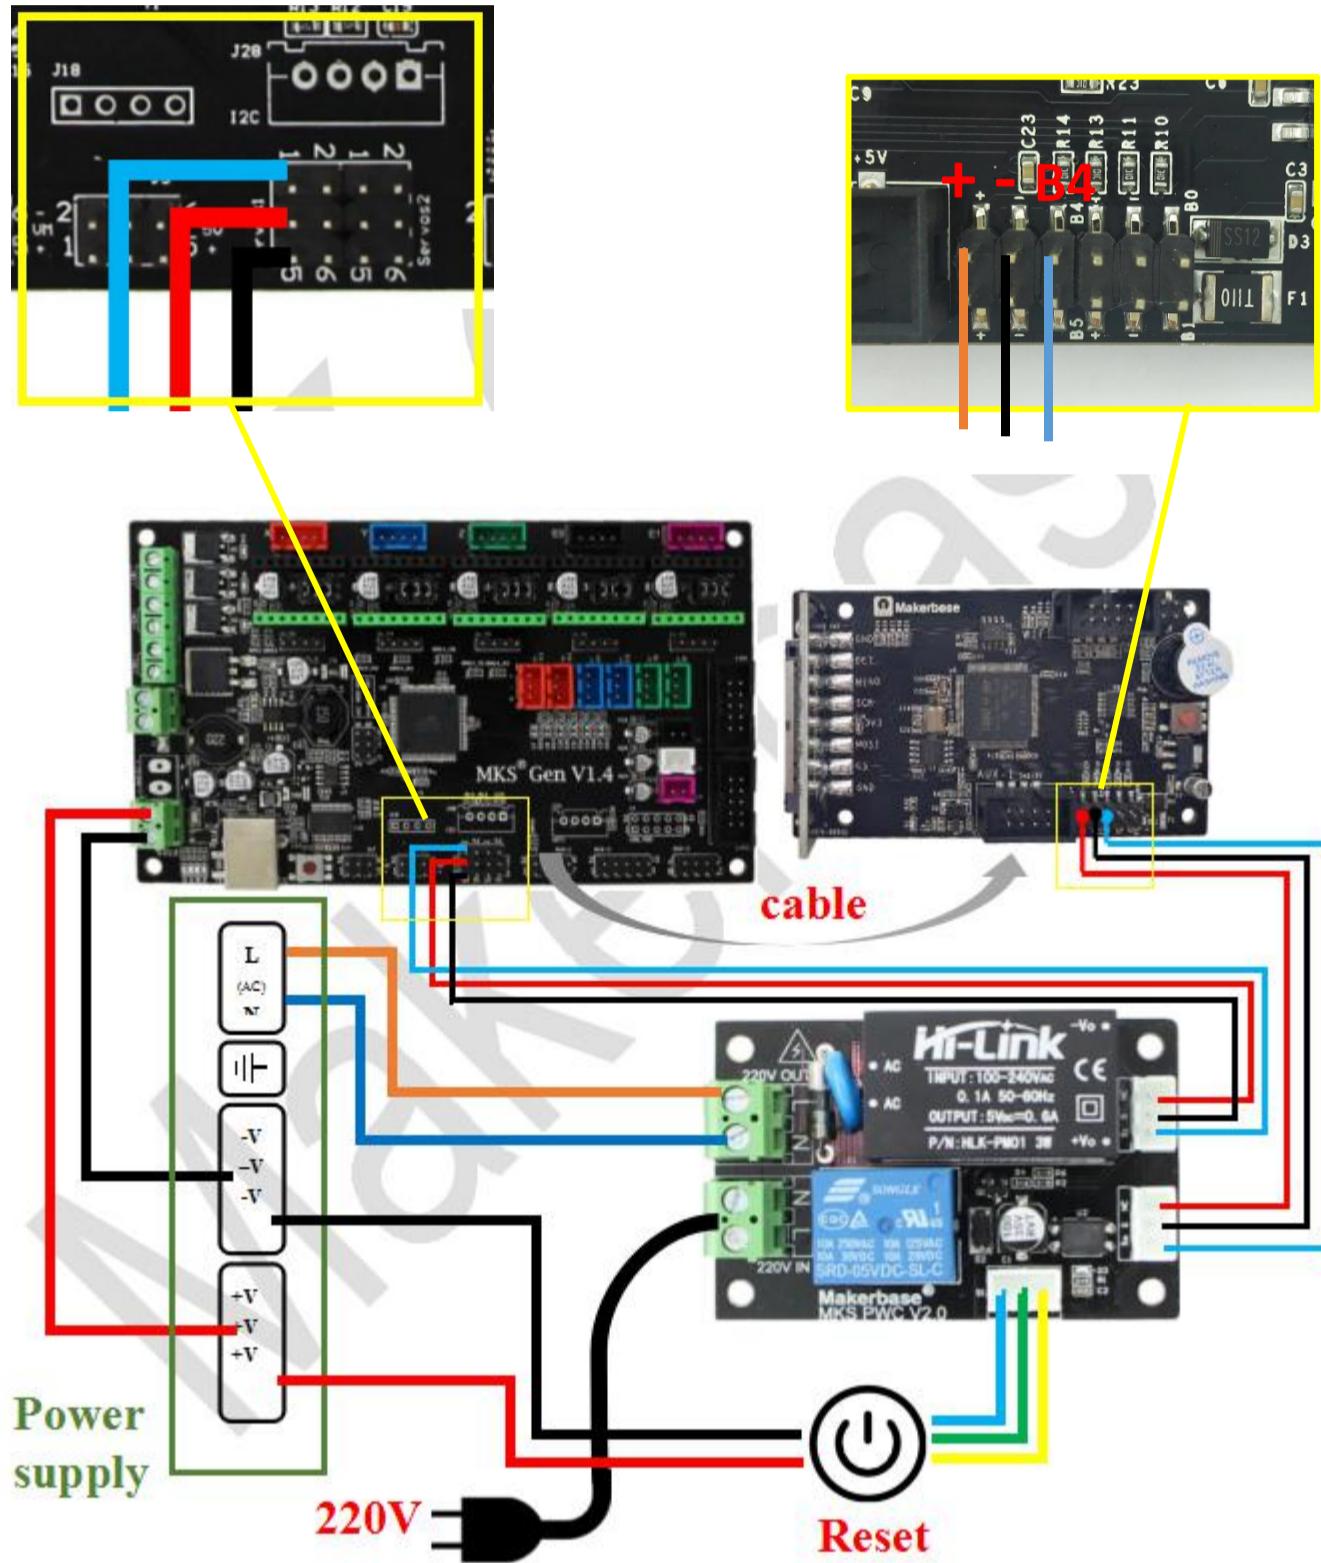

```
#set PB1 signal (high level:1; low level:0)
>cfg_PB1_trigger_Level:0
```

6.9 Auto off after print finish function

Open the auto off after print finish function in the configuration file, cooperate with PWC to complete the shutdown module, you can use the shutdown function after playing.

```
#enable auto off after print finish function (no:0; Yes:1 )  
>cfg_print_finish_close_Machine:0
```

VII .The network printing function

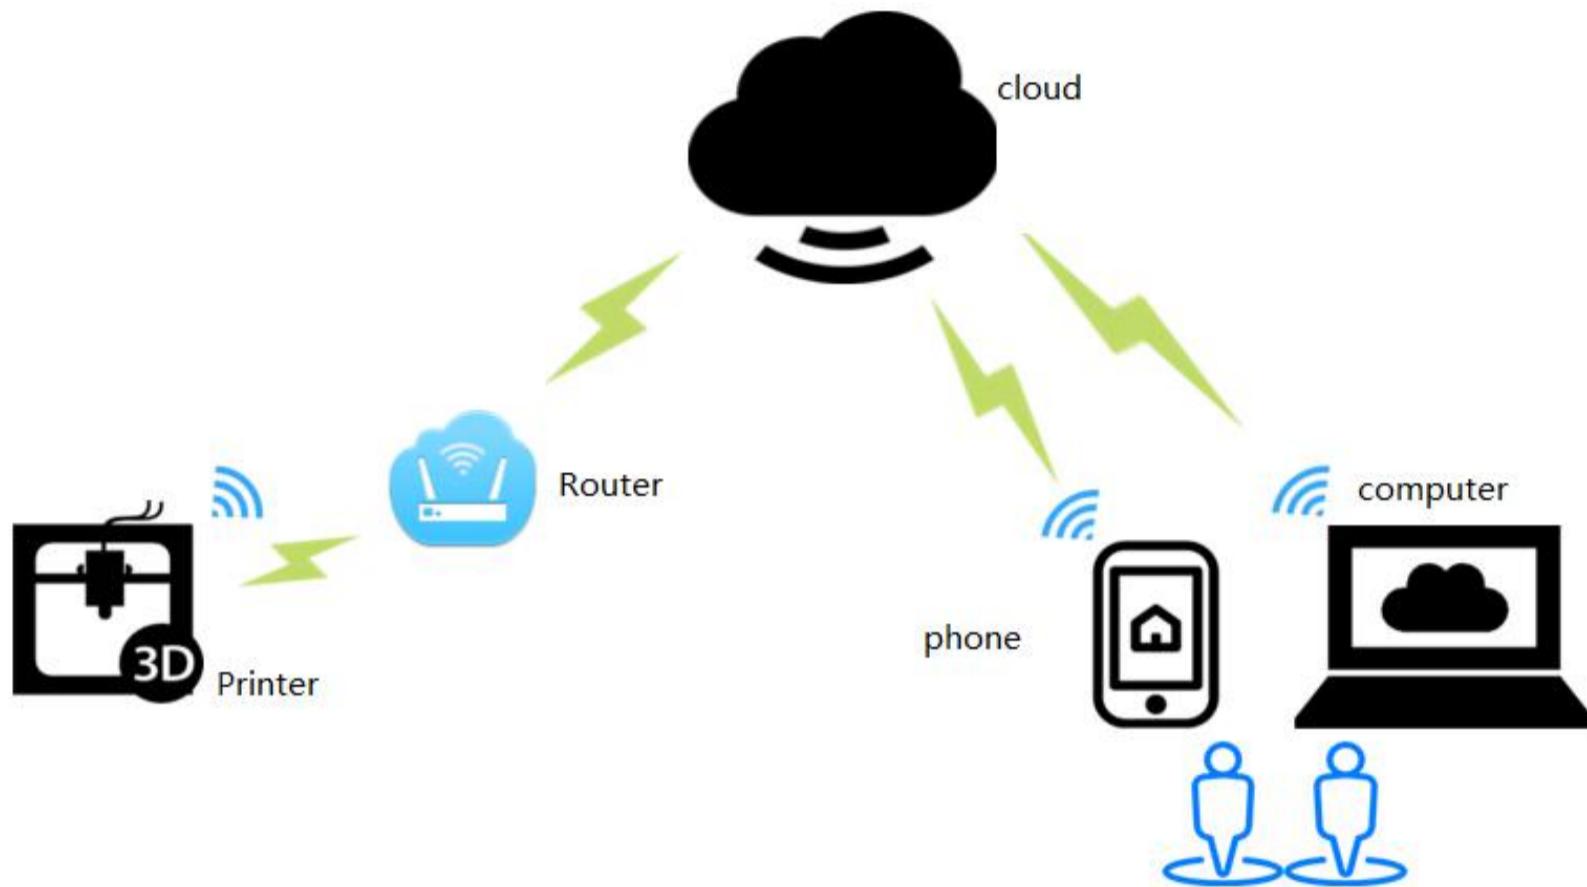

MKS TFT24 Need to use MKS TTF-WIFI to achieve network printing.

7.1 Introduction to Print Mode

1. Cloud Print Mode: Recommended for use in a WiFi router environment with Internet access. Once you have a network connection to the WiFi module, the printer becomes the online printer on the cloud. Access to the app or control printer anywhere in the world. can also be in the local area network through the host computer (Printrun, etc.) to control the printer.
2. LAN Print Mode: Recommended in the case of a WiFi router, but the router is not available on the Internet or the network is slow (the cloud Print mode printer responds too slowly).
- 3 . AP printing mode:When the printer is in an environment where there is no WiFi router, the WiFi module is not configured, the WiFi module is configured, but the network environment is not good enough to connect to the router, the above three cases are entered by default. At this time the WiFi module will produce hot "mkswifi-xxxx" (open hotspot, no password), you can access the hotspot through the app, browser, host computer (Printrun, etc.) to control the printer.
- 4 . WebServer print mode: special mode, not recommended. This mode also controls the printer in the LAN. It can be controlled by the computer's Web, transfer files, print, etc. It can't use the APP control. You need to brush the Web version firmware to use it.

7.2 Cloud Print Mode

1 .Network Diagram

Features: Can control printers anywhere in the world by app.

2 .WiFi setting

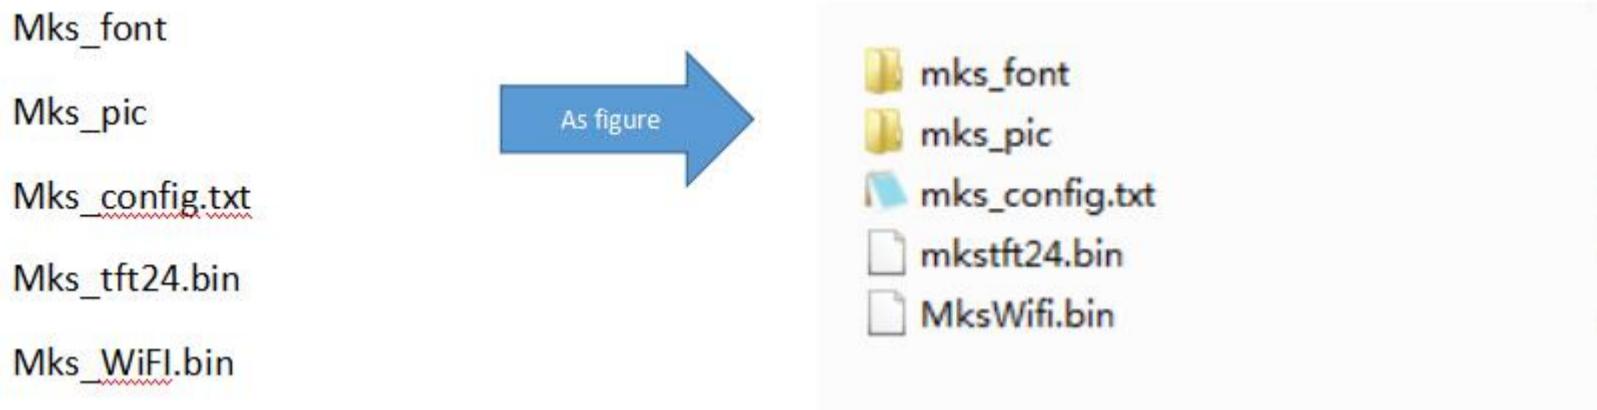

MKS Robin Lite-wifi Configuration

The WiFi configuration options in the configuration file are shown in the following table:

Mks_config.txt	Description
#wifimodel(0:MKS WIFI TFT 1:MKS HLK-WIFI) >cfg_wifi_type:0	
#wifi mode(0:sta;1:ap) >CFG_WIFI_MODE 0	Set WiFi mode to STA mode
#wifi name >CFG_WIFI_AP_NAME MKSWIFI	Set the WiFi name to the name of the router you want to connect to
#wifi password >CFG_WIFI_KEY_CODE MAKERBASE	Set the WiFi password to the router password you want to connect to
#cloud service enable(0:disable 1:enable) >cfg_cloud_enable:1 #cloud server url >cfg_wifi_cloud_host:www.baizhongyun.cn #cloud server port >cfg_cloud_port:10086	The default settings can be

3 .Firmware update

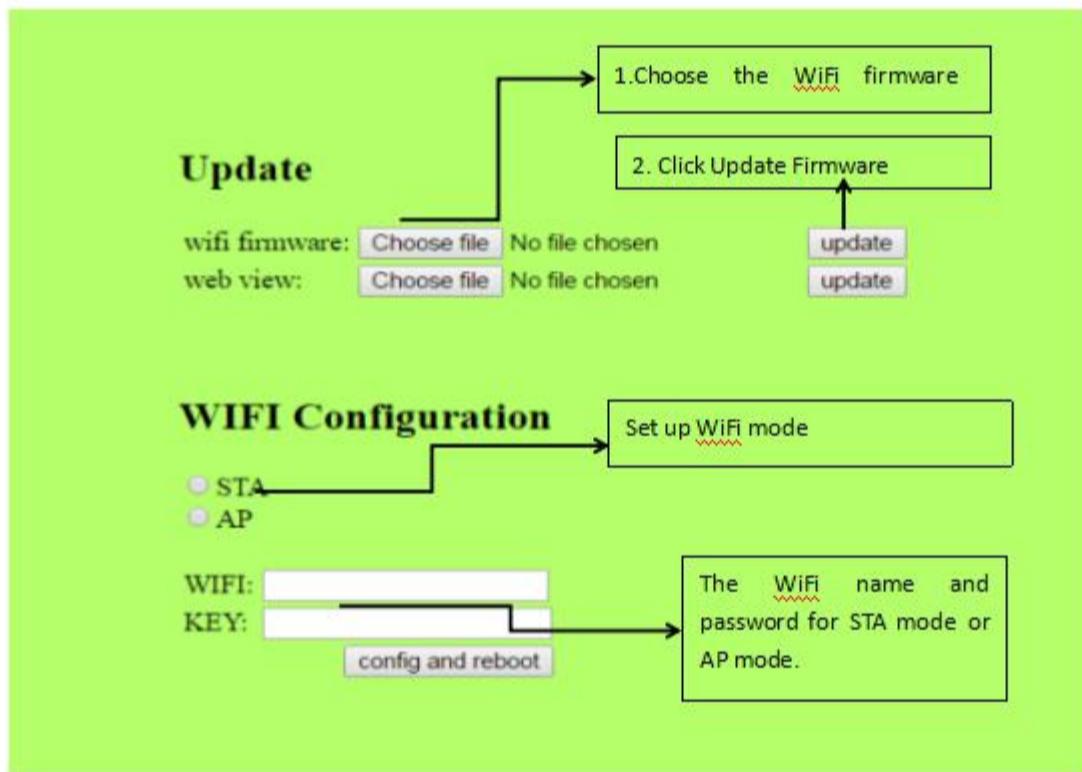

3.1 Copy the latest upgrade program to the SD card root directory, the motor can be renewed, upgrade procedures include:

3.2 Update Considerations

- The filename is not modifiable, or it will cause an update failure;
- After the successful upgrade of the program, the filename will change;
- The current motherboard firmware and WiFi firmware version number can be viewed in the about.

3.3 WIFI firmware update can also be updated through the web side, in the same LAN, in the Computer browser input IP address, access to the Web page update firmware interface, the following figure:

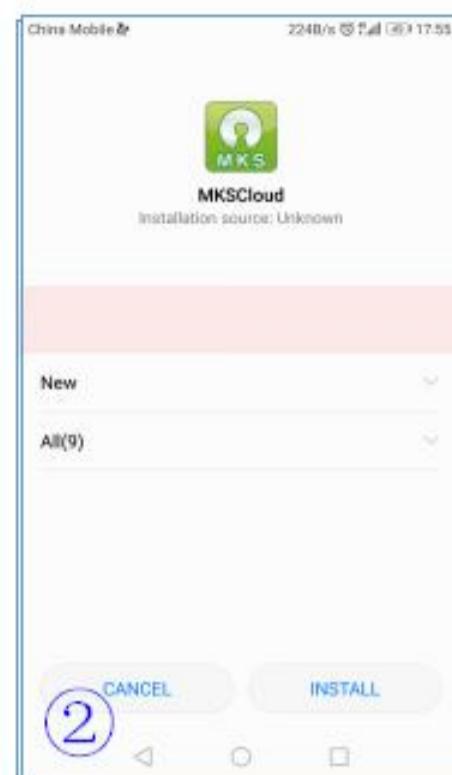

4 .APP print

7.3 LAN Print mode

1. Network Diagram

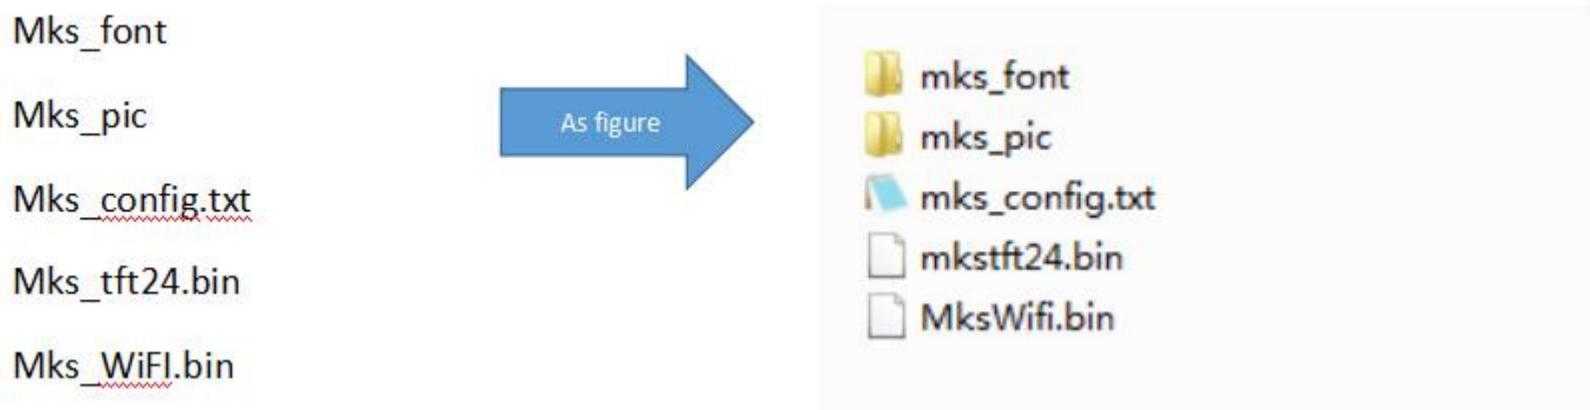

Features: Can control printer in LAN

3 .Software update

3.1 Copy the latest upgrade program to the SD card root directory, the motor can be renewed, upgrade procedures include:

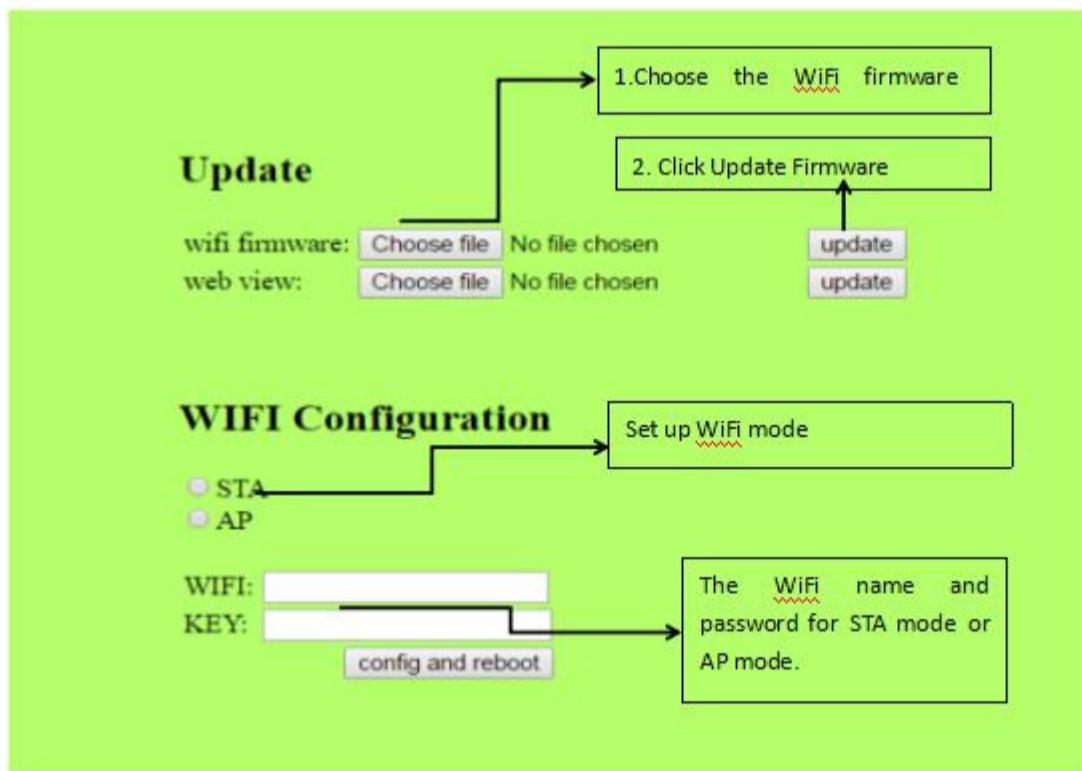

Mks_config.txt	Description
#wifimodel(0:MKS WIFI TFT 1:MKS HLK-WIFI) >cfg_wifi_type:0	
#wifi mode(0:sta;1:ap) >CFG_WIFI_MODE 0	Set WiFi mode to STA mode
#wifi name >CFG_WIFI_AP_NAME MKSWIFI	Set the WiFi name to the name of the router you want to connect to
#wifi password >CFG_WIFI_KEY_CODE MAKERBASE	Set the WiFi password to the router password you want to connect to
#cloud service enable(0:disable 1:enable) >cfg_cloud_enable:1 #cloud server url >cfg_wifi_cloud_host:www.baizhongyun.cn #cloud server port >cfg_cloud_port:10086	It is recommended to disable the cloud services, when LAN control. Other parameters can be used by default.

3.2 Update Considerations

- A. The filename is not modifiable, or it will cause an update failure;
- B. After the successful upgrade of the program, the filename will change;
- C. The current motherboard firmware and WiFi firmware version number can be viewed in the about.

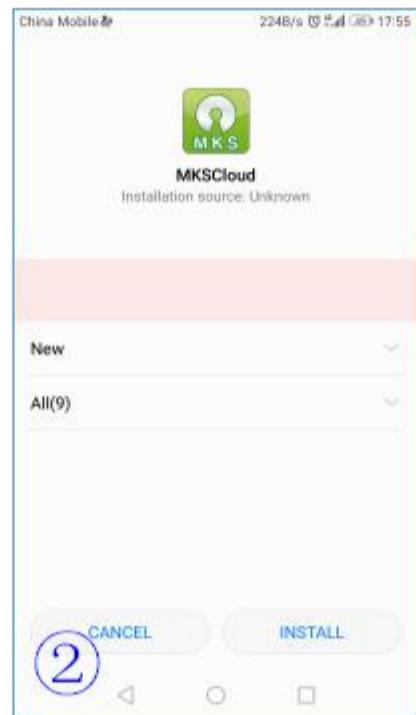

3.3 WIFI firmware update can also be updated through the web side, in the same LAN, in the Computer browser input IP address, access to the Web page update firmware interface, the following figure:

7.4 Upper Computer Printing

4.1 printrun printing

Here fill in "IP address +:8080", IP address can be in the set "WiFi" view, such as the above image of the IP address of 192.168.0.114, so fill in as: 192.168.0.114:8080;

Baud rate selection is 115200 (same as the baud rate of the motherboard, modified according to the actual situation)

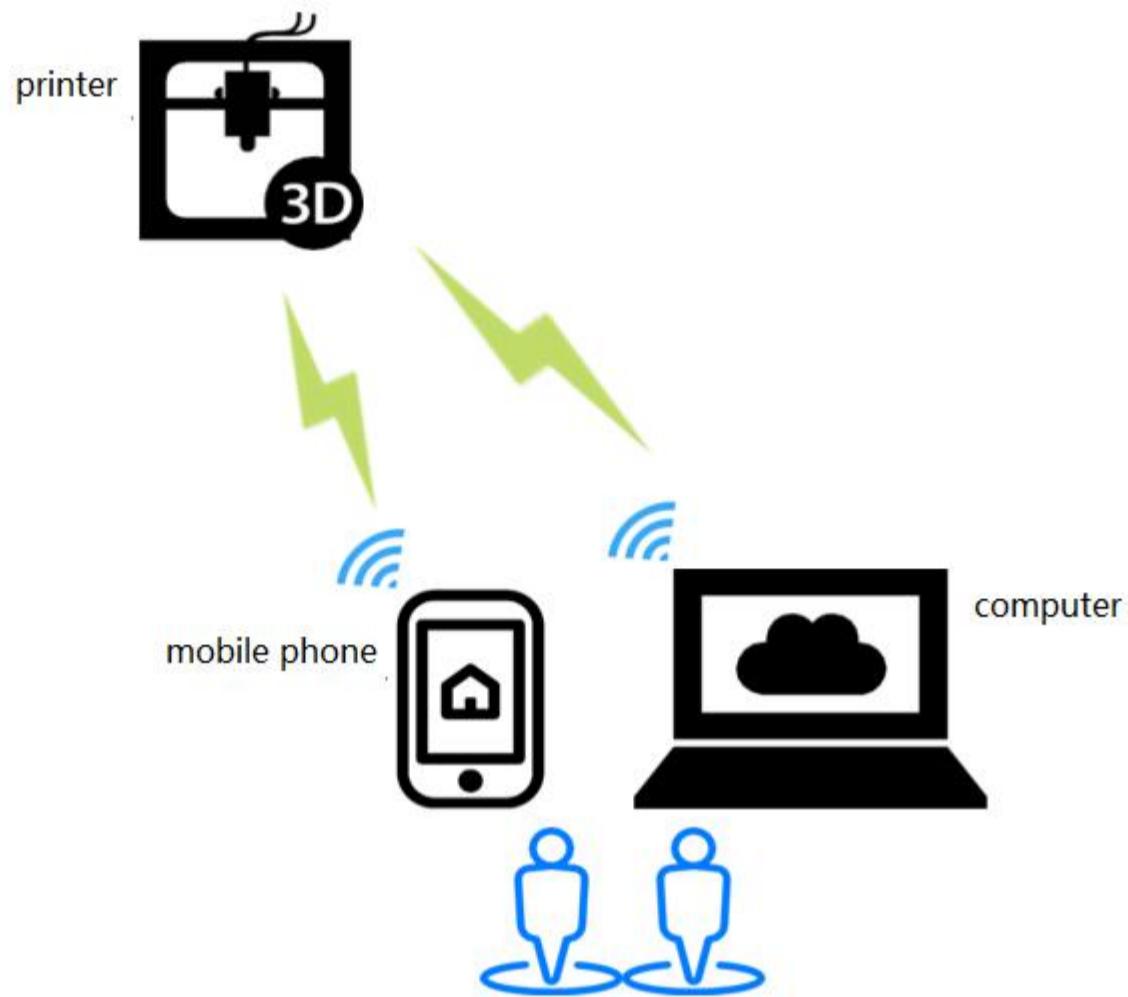

The button of connect and disconnect.

After the icon color becomes darker, the connection is successful;

choose SD file printing or select the computer file printing (select the computer file printing is a command transmission printing, so the printing effect is not good, and unstable, do not recommend this method)

View information about the printer feedback.

7.5 AP mode

Features: WIFI module will generate hotspot "MKSWIFI-XXXX" (open hotspot, no password), you can access the hotspot to control the printer.

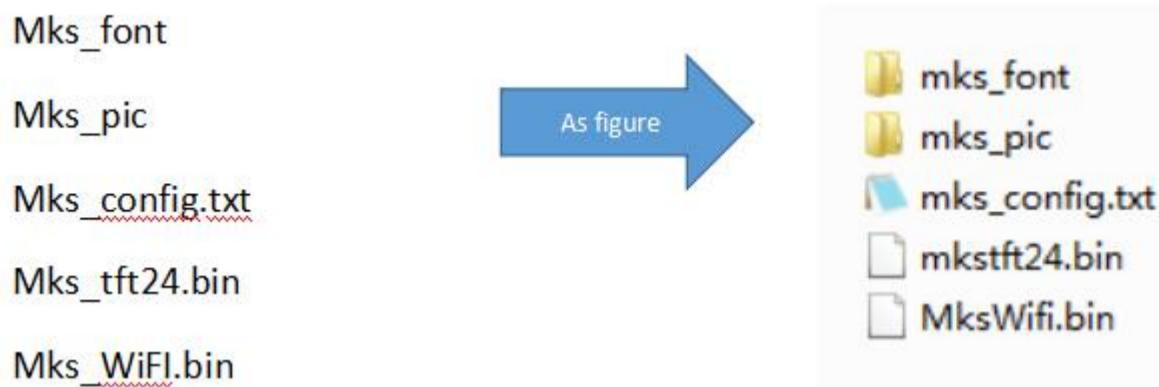

2 .Software update

2.1 Copy the latest upgrade program to the SD card root directory, the motor can be renewed, upgrade procedures include:

Mks_config.txt	Description
#wifimodel(0:MKS WIFI TFT 1:MKS HLK-WIFI) >cfg_wifi_type:0	
#wifi mode(0:sta;1:ap) >CFG_WIFI_MODE 1	Set WiFi mode to AP mode
#wifi name >CFG_WIFI_AP_NAME TEST	Set the WiFi name to the name of the hotspot you want to connect to
#wifi password >CFG_WIFI_KEY_CODE MAKERBASE	Set the WiFi password to the hotspot password you want to connect to
#cloud service enable(0:disable 1:enable) >cfg_cloud_enable:1 #cloud server url >cfg_wifi_cloud_host:www.baizhongyun.cn #cloud server port >cfg_cloud_port:10086 #Dynamic ip acquisition >cfg_ip_dhcp_flag:1	The default settings can be

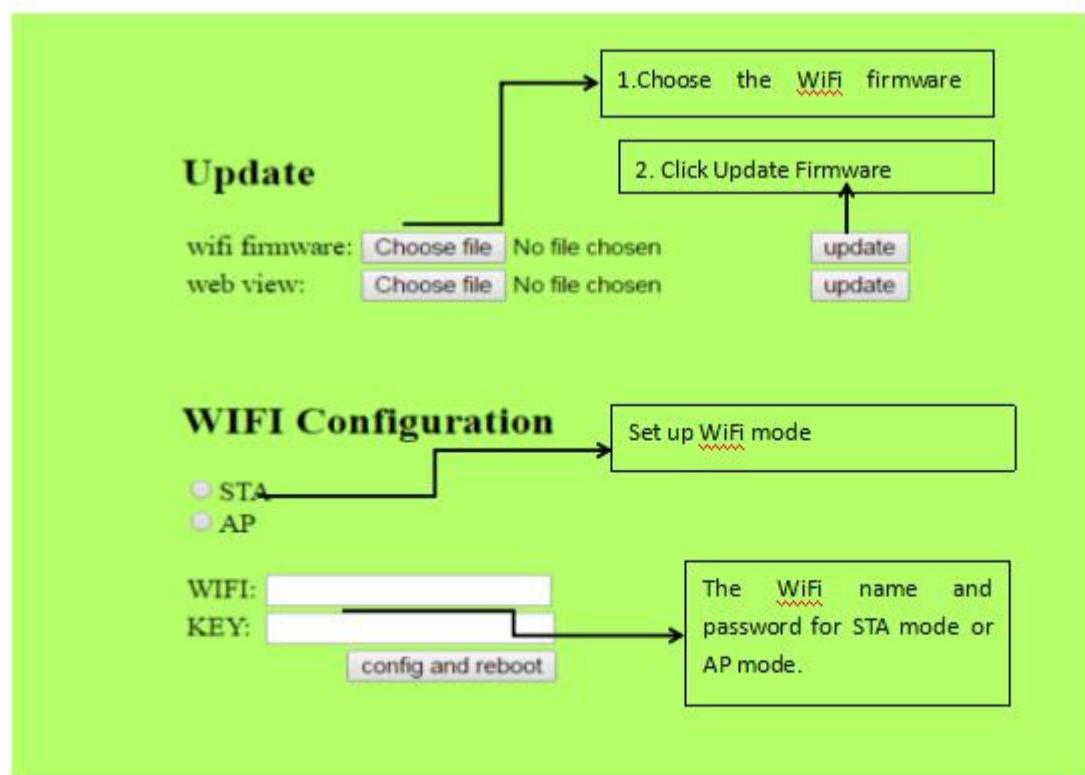

#IP/mask/gate	
>cfg_ip_address:192.168.3.100	
>cfg_ip_mask:255.255.255.0	
>cfg_ip_gate:192.168.3.1	

3.2 Update Considerations

- D. The filename is not modifiable, or it will cause an update failure;
- E. After the successful upgrade of the program, the filename will change;
- F. The current motherboard firmware and WiFi firmware version number can be viewed in the about.

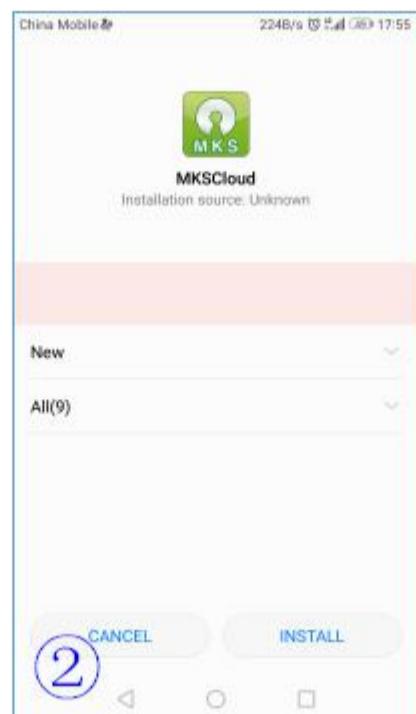

3.3 WIFI firmware update can also be updated through the web side, in the same LAN, in the Computer browser input IP address, access to the Web page update firmware interface, the following figure:

4 .APP print

Download MKSCloud App

Installation

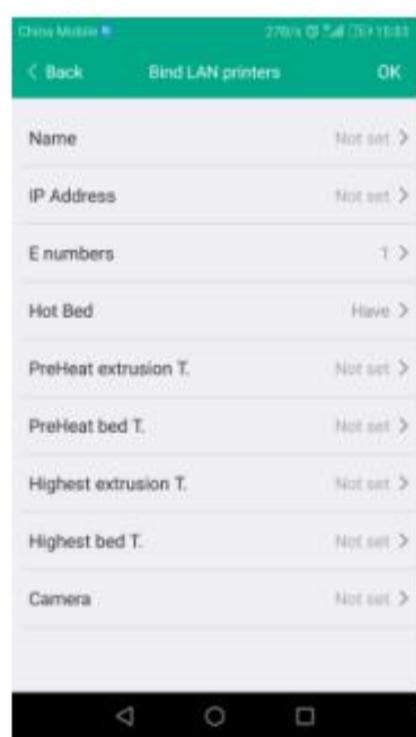

login

Printing interface

choose the file

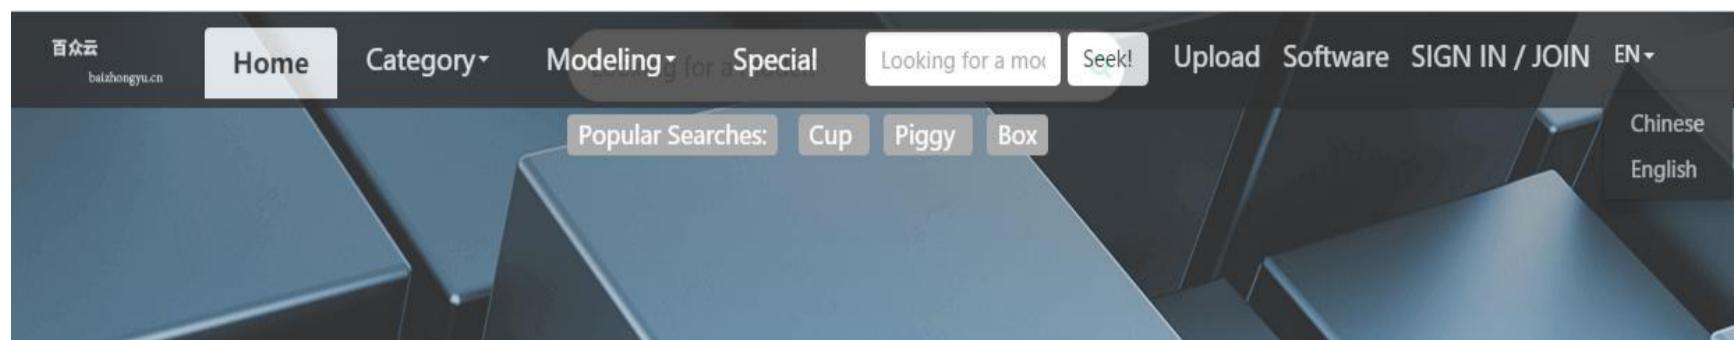

add the printer

Attention: The ip address can be viewed on the wifi interface of the touch screen (the hotspot sent by the wifi module on the phone sequence can be printed with the app)

9.1 Blue style

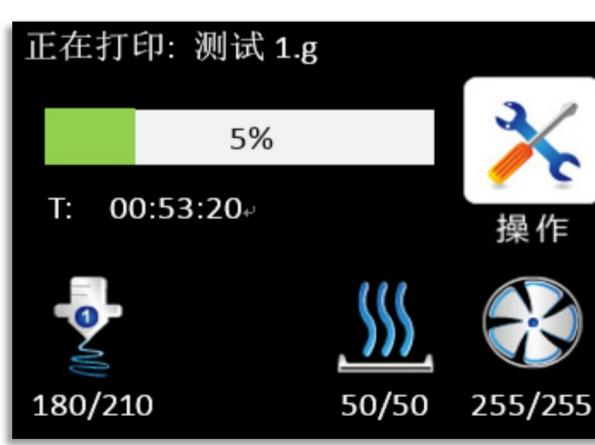

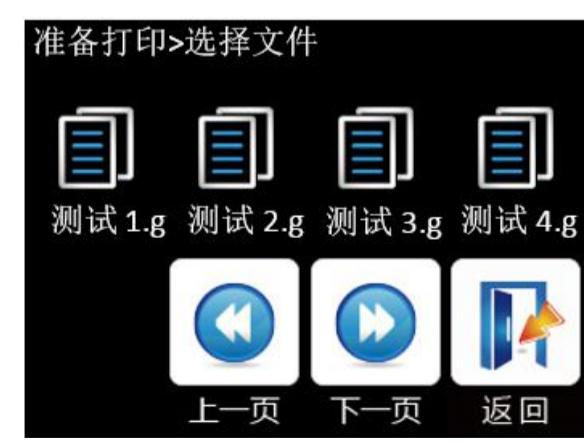

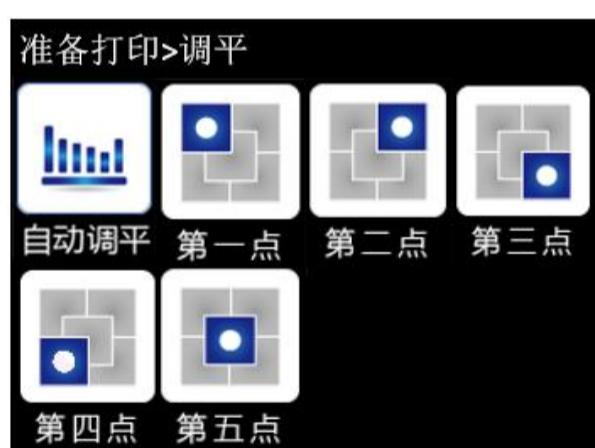

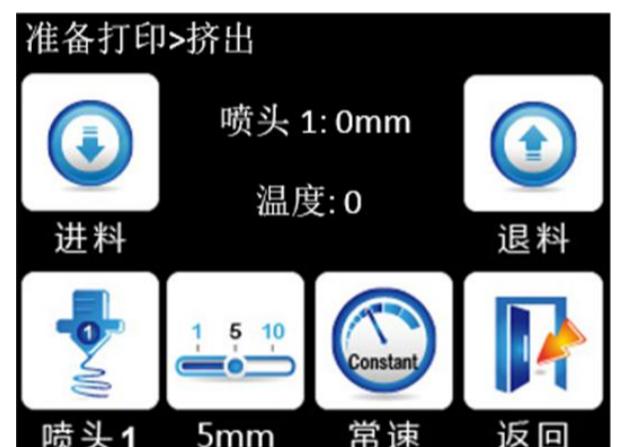

(Simple)

(Classic)

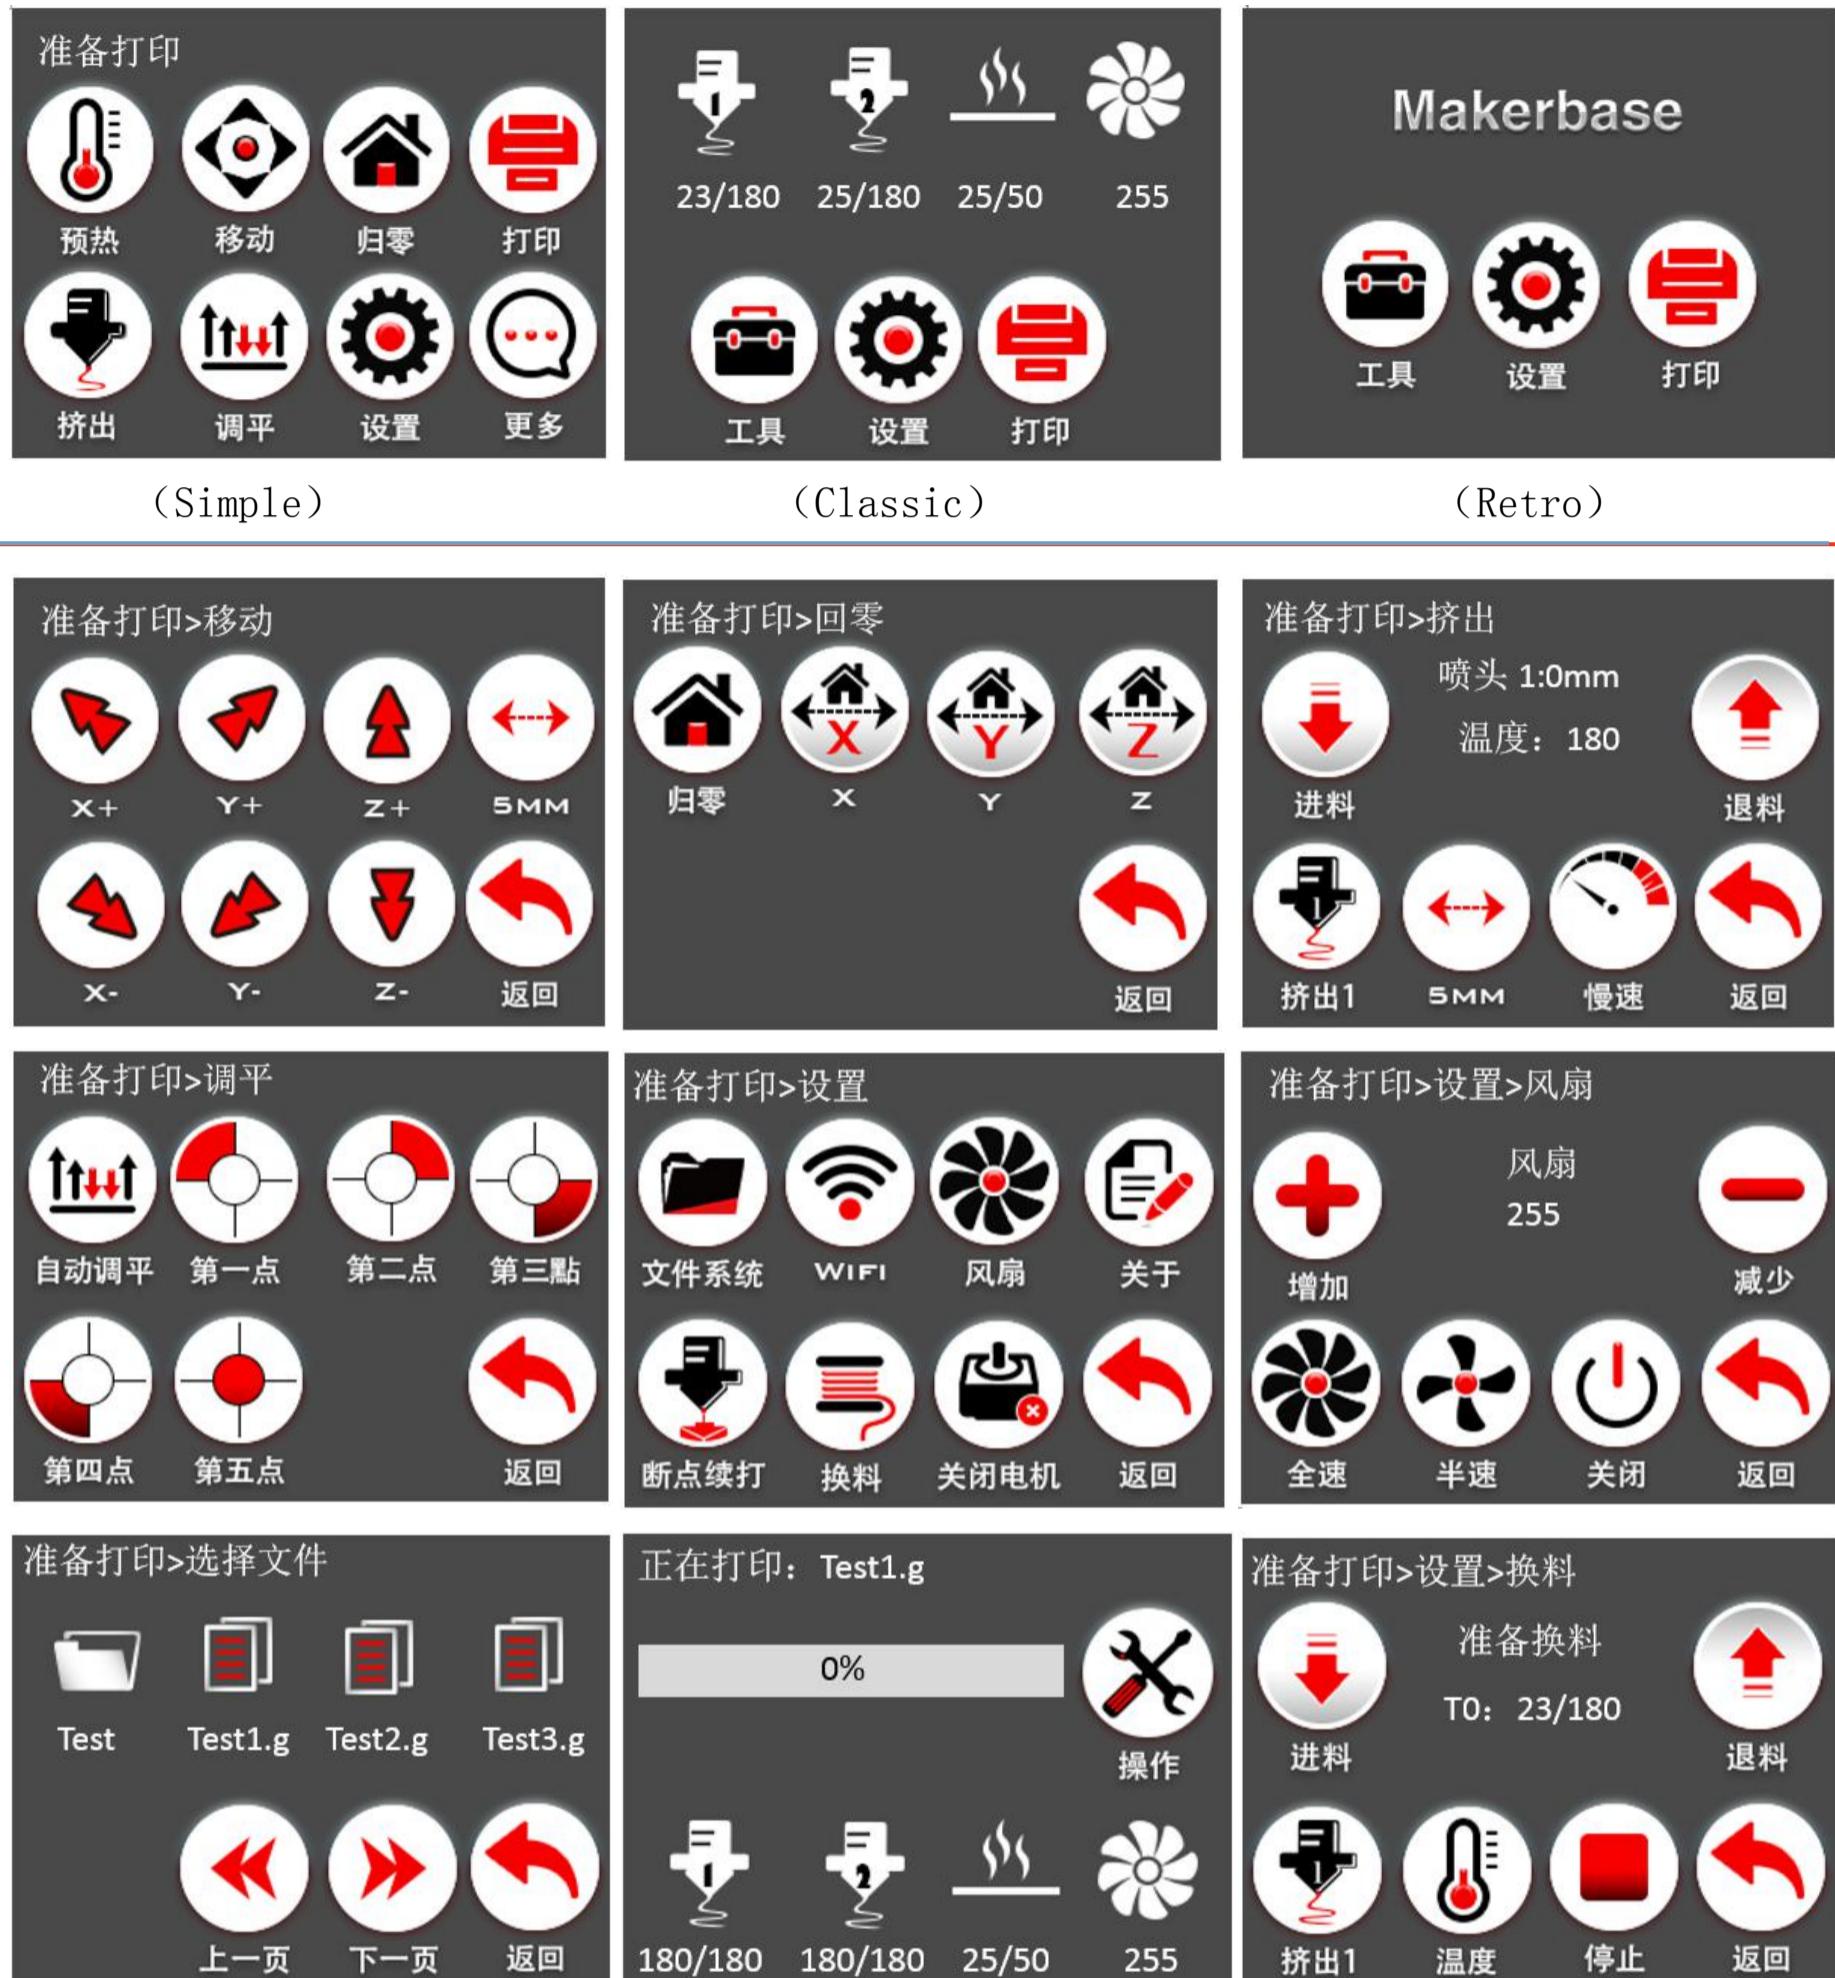

(Retro)

9.2 Windows style

9.3 Red style

(1) Special instructions

The red style is modified on the basis of a UI designed by a foreign user, allowing users to choose more styles.

I am very grateful to this excellent design engineer. The following is the original words of the design engineer:

Special explanation: The red style is modified from the UI designed by Isaac Norris, which provides the users with more choice. The following is the designer Isaac Norris

words:

Hello and thank you for downloading my modified version of the MKS TFT User Interface.

Instructions-

1. copy the contents of the firmware folder to an SD card then insert the card into the readeron the MKS TFT Display. I am using the 3.2" varriant and that is all that will work with this OS.
2. Power on the board, it will automatically install the firmware.
3. Once it powers on you are ready to go!

This interface took alot of design time and effort to put together so I hope that you all apreciate it as a step forward in User Interfaces for 3D Printers.

All Credit for this UI's Design and assembly goes to me, Isaac Norris, the owner and operator of Dimension 3 Fabrication in Asheville NC.

I hope that you all get the best from this user interface and share it freely, but I do not want this UI sold as it is Copywritten under the Creative Commons Copywrite.

The purpose for designing this UI was for the custom Delta 3D Printers that my company, DImension 3, will be manufacturing and the reason that I am sharing this with all of you is that I believe in sharing information, as the only way to make the world better is to help the spread of ideas.

Thanks everyone for your support and if you have any questions email me at Dimension3fab@gmail.com or personally at Flightfixit@gmail.com.

If you want to find me online search FlightFixit for my 3D modeling and Dimension 3 Fabrication for the Delta 3D Printers.

Hope you all get the best out of my UI.

X .TFT touch Screen User interface configuration

10.1 Conventions:

If the customer needs to customize the display picture of the touch screen, the first should follow the following conventions:

- 1 . Scope of customization:
 - A. Power-on interface logo;
 - B. Picture of the button (see below "1" and "2") (including icons and text);
 - C. Screen background color (see below figure "3", default black);

 - F. Display the color of the state such as temperature (see below figure "6", the default white);
 - G. " Select the file interface, the font color of the file name (see figure "7", the default white);
 - H. " Select the file interface, the font background color of the file name, and suggest the same color as the picture;
 - I. " Printing "interface, printing status information text background color; (See figure" 8 ", default white);
 - J. " Printing interface, print status information font color, suggest and picture color is the same;
 - K. Whether the button requires a 3D effect, the default is that the need, that is, the button picture outside the white

- (1)Custom boot logo picture, 16DPP, wide =320 pixel, high =240 pixel;
- (2) Custom button picture, 16DPP, wide =78 pixel, high =104 pixel;
- (3) The name of the customized picture must be named in accordance with the appendix;
- (4) Custom color value is 16, in accordance with 3 primary colors blue, green, red order;
- (5) Customize the "More" menu function button, can be customized up to 7 function buttons;
- (6) Custom "Print more" function button, can be customized up to 6 function buttons;

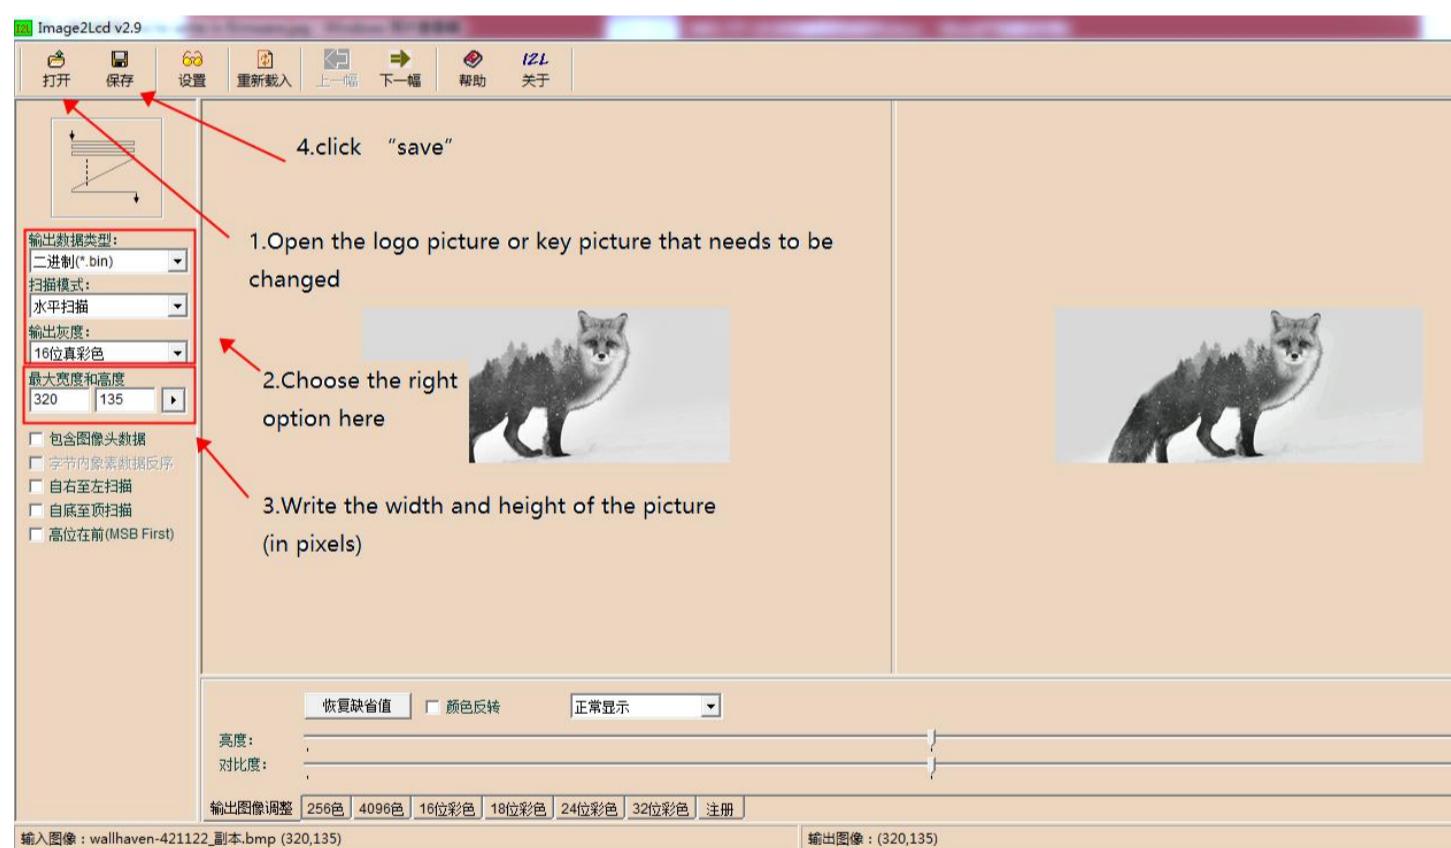

10.2 Steps

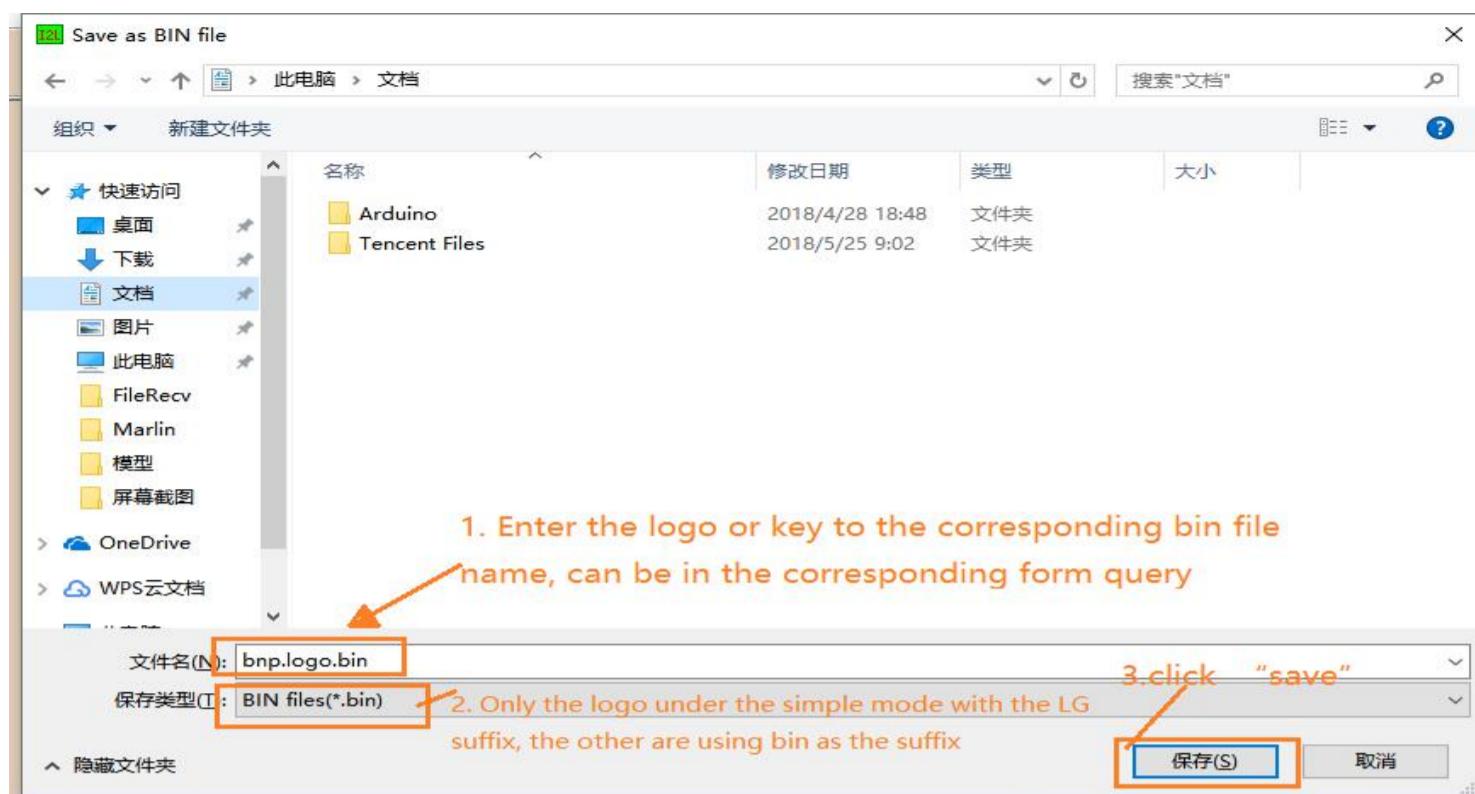

1.1 Preparation Tools

1.IMG2LCD software (cracked version of no watermark, ask customer service to obtain)

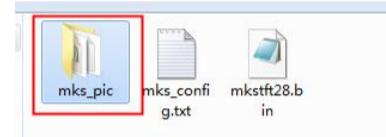

2.corresponding to the. bmp suffix name of the picture, pixels to correspond, do not know the pixel, please see above.

3.You can ask the customer to obtain the key source AI file to make two modifications.

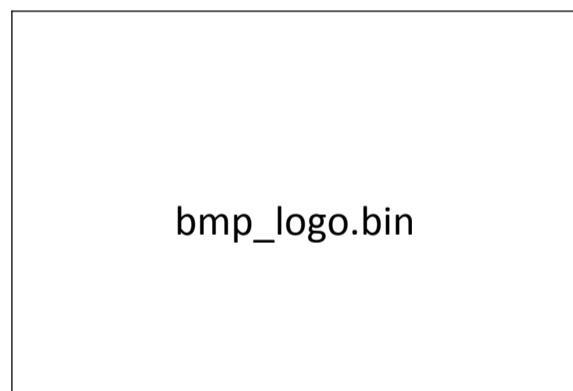

Copy the saved files to the Mks_pic folder
logo and key picture naming

10.3 Name of logo and button picture

Picture naming rules (note that some pictures are duplicated, just provide one)

Power-on logo.

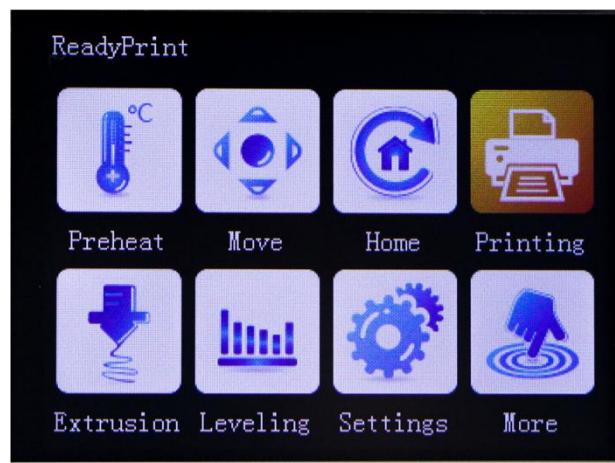

Small LOGO (Simple)

Ready to print Interface:

Preheat: bmp_preHeat.bin	Move: bmp_mov.bin	Home: bmp_zero.bin	Print: bmp_printing.bin
Extract: bmp_extruct.bin	Leveling: bmp_leveling.bin	Setting: bmp_set.bin	More: bmp_more.bin

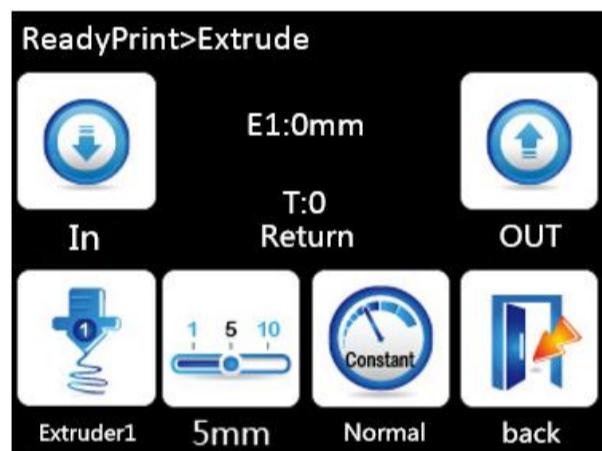

Preheat interface:

Add: bmp_Add.bin			Dec: bmp_Dec.bin
Preheat: Hot bed : bmp_bed.bin Extrul : bmp_extrul.bn Exteu2: Bmp_extru2.bn	Step: Step1_degree: bmp_step1_degr.ee.bin Step5: bmp_step5_degr.ee.bin Step10: bmp_step10_degr.ee.bin	close: bmp_speed00.bin	Return: bmp_return.bin

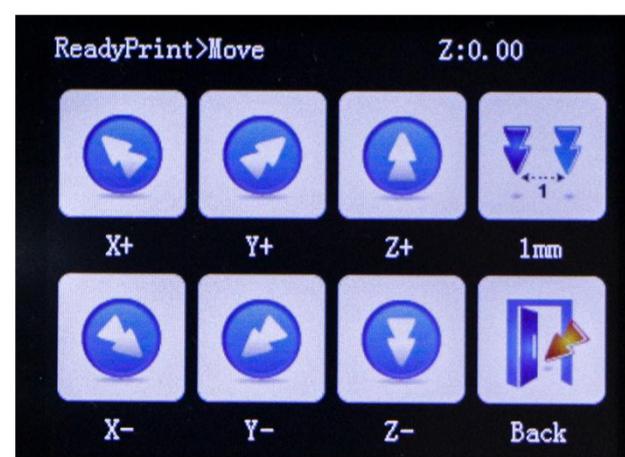

Extrusion interface

In: bmp_in.bin			Out: bmp_out.bin
Extru (E) : E1: bmp_extrul.bn E2: bmp_extru2.bn	Step: 1mm: bmp_step1_mm.bin 5mm: bmp_step5_mm.bin 10mm: bmp_step10_mm.bin	Rate: Low: bmp_speed_slow.bin Normal: bmp_speed_normal.bin High: bmp_speed_high.bin	Return: bmp_return.bin

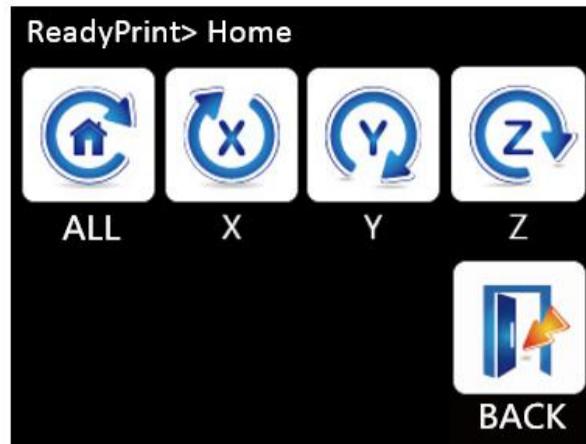

MOVE interface

X+: bmp_xAdd.bin	Y+: bmp_yAdd.bin	Z+: bmp_zAdd.bin	Step: 0.1mm: Bmp_step_move0.1.bin 1mm: bmp_step_move1.bin 10mm: bmp_step_move10.bin
X-: bmp_xDec.bin	Y-: bmp_yDec.bin	Z-: bmp_zDec.bin	return: bmp_return.bin

Home interface

A11 (Home): bmp_zero A.bin	X: bmp_zeroX. bin	Y: bmp_zeroY. bin	Z: bmp_zeroZ.bin
			return (Back) : bmp_return.bin

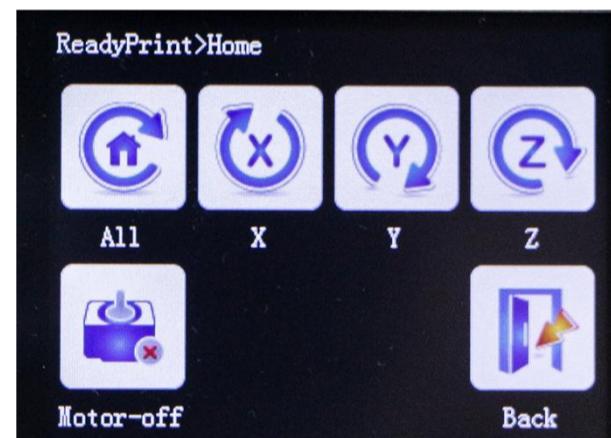

Language interface

simplified _cn: bmp_simpli fied_cn.bi n	_traditiona l_cn. : bmp_traditi onal_cn.bin	english : bmp_englis h.bin	russian: bmp_russian .bin

Pause interface

resume: bmp_ resume.bin			stop: bmp_stop.bin
Extract: bmp_ extract.bin	Move: bmp_ mov.bin	Temperate : bmp_temp. bin	More (move) : bmp_ more.bin

Speed interface

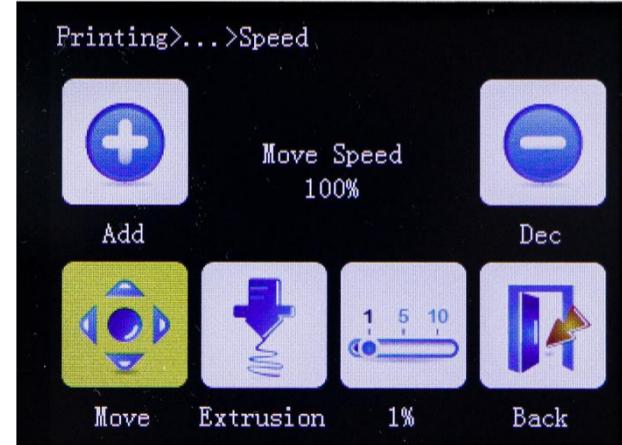

Add: bmp_Add.bi n			Dec: bmp_Dec.bin
Move: No set: bmp_mov.bi n	Extract: No set: bmp_extract .bin	Step: 1mm: bmp_step1_m m.bin	Return: bmp_return.bin

Set :
bmp_mov_se
l.bin

Set :
bmp_extract
_sel.bin

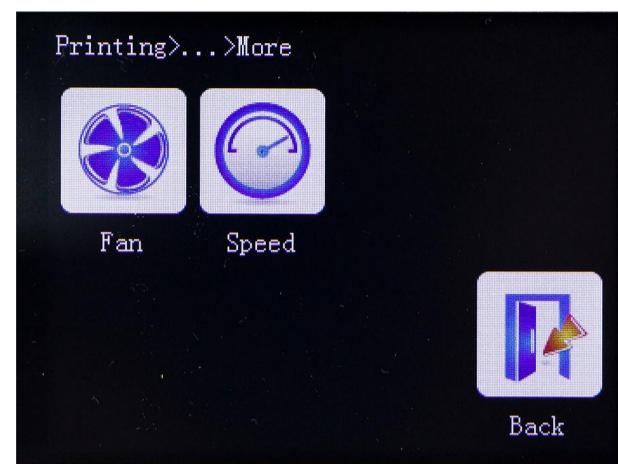

Step:
5mm:
bmp_step5_m
m.bin

10mm:
bmp_step10_
mm.bin

More interface in pause printing

Fan: bmp_fan.bi n	Filament change: bmp_filamentc hange.bin	Auto off: bmp_auto_off. bin	morefun1: bmp_morefunc1. bin
morefun2: bmp_morefu nc2.bin	morefun3: bmp_morefunc3 .bin	morefun4: bmp_morefunc4 .bin	Return: bmp_return.bin

Wifi interface

		Cloud: bmp_cloud.bin	Return: bmp_return.bin

Common color corresponding to the hexadecimal value

蓝色		0x0000FF
绿色		0x00FF00
红色		0xFF0000
黄色		0xFFFF00
浅蓝		0xE1FFFF
浅绿		0x80FF80
浅红		0xFF8080
青色		0x00FFFF
浅青色		0x80FFFFFF
浅黄色		0xFFFF80
深绿色		0x008000
深红色		0x800000
深蓝色		0x000080
深黄色		0x808000
黑色		0x000000
白色		0xFFFFFFFF

X I . Technical support and protection

1. Power test will be done prior to shipment to ensure normal use of the product
2. Welcome friends to join the discussion group: 232237692.
3. Welcome to Blog Exchange : <http://flyway97.blog.163.com>.
4. 3D printer motherboard contact

Miss Zhong: 15521638375 Mr. Huang: 13148932315 Mr. Tan: 13640262556.

Mr.Peng: 13427595835

5. If you have any questions you can contact our customer service or find technical support staff in the group, we will be happy to serve you.
